

Behavior of surfactants:

- When a molecule with amphiphilic structure is dissolved in aqueous medium, the hydrophobic group distorts the structure of the water.
- As a result of this distortion, some of the surfactant molecules are expelled to the surfaces of the system with their hydrophobic groups oriented to minimize contact with the water molecules.

Surfactants in Consumer Products

Jürgen Falbe, 2012-12-06 In today's market custom formulated surfactants are offered for a wide range of applications The need for surfactants in detergents cleaning agents cosmetics toiletries is second only to an expanding demand in industrial applications But even within the non industrial areas the demands have undergone significant changes in recent years For example washing and cleaning temperatures have substantially decreased with increased energy conservation attitudes and more stringent regulatory requirements in the area of ecology and toxicology are leading to new product profiles New manufacturing technologies and an increased utilization of natural raw materials also factor into this continuing evolution These changes and trends have been described in numerous publications However a summary and survey of these developments is currently missing The book presented here Surfactants in Consumer Products is intended to close this gap The editor and authors dedicate this work to Dr Dr h c Konrad Henkel on the occasion of his 70th birthday Dr Henkel himself a scientist and industrialist contributed significantly to developments in the surfactant field In the nineteen fifties he initiated the change from soap based detergents to synthetic detergents within Henkel At the same time dishwashing detergents utilizing various synthetic surfactants were also developed and became the basis for modern manual and mechanical dishwashing
