Archaeology and Language I Roger Blench, Matthew Spriggs, 1997-08-28 Archaeology and Language I represents groundbreaking work in synthesizing two disciplines that are now seen as interlinked linguistics and archaeology This volume is the first of a three part survey of innovative results emerging from their combination Archaeology and historical linguistics have largely pursued separate tracks until recently although their goals can be very similar While there is a new awareness that these disciplines can be used to complement one another both rigorous methodological awareness and detailed case studies are still lacking in literature Archaeology and Language I aims to fill this lacuna Exploring a wide range of techniques developed by specialists in each discipline this first volume deals with broad theoretical and methodological issues and provides an indispensable background to the detail of the studies presented in volumes II and III This collection deals with the controversial question of the origin of language the validity of deep level reconstruction the sociolinguistic modelling of prehistory and the use and value of oral tradition Archaeology and Language IV Roger Blench, Matthew Spriggs, 2003-09-02 Archaeology and Language IV examines a variety of pressing issues regarding linguistic and cultural change It provides a challenging variety of case studies which demonstrate how global patterns of language distribution and change can be interwoven to produce a rich historical narrative and fuel a radical rethinking of the conventional discourse of linguistics within archaeology

The Evolution of Cultural Diversity Ruth Mace, Clare J Holden, Stephen Shennan, 2016-09-16 Virtually all aspects of human behavior show enormous variation both within and between cultural groups including material culture social organization and language Thousands of distinct cultural groups exist about 6 000 languages are spoken today and it is thought that a far greater number of languages existed in the past but

became extinct Using a Darwinian approach this book seeks to explain this rich cultural variation There are a number of theoretical reasons to believe that cultural diversification might be tree like that is phylogenetic material and non material culture is clearly inherited by descendants there is descent with modification and languages appear to be hierarchically related There are also a number of theoretical reasons to believe that cultural evolution is not tree like cultural inheritance is not Mendelian and can indeed be vertical horizontal or oblique evidence of borrowing abounds cultures are not necessarily biological populations and can be transient and complex Here for the first time this title tackles these questions of cultural evolution empirically and quantitatively using a range of case studies from Africa the Pacific Europe Asia and America A range of powerful theoretical tools developed in evolutionary biology is used to test detailed hypotheses about historical patterns and adaptive functions in cultural evolution Evidence is amassed from archaeological linguist and cultural datasets from both recent and historical or pre historical time periods A unifying theme is that the phylogenetic approach is a useful and powerful framework both for describing the evolutionary history of these traits and also for testing adaptive hypotheses about their evolution and co evolution Contributors include archaeologists anthropologists evolutionary biologists and linguists and this book will be of great interest to all those involved in these areas **The Language of Hunter-Gatherers** Tom Güldemann, Patrick McConvell, Richard A. Rhodes, 2020-02-27 Offers a linguistic window into contemporary hunter gatherer societies looking at how they survive and interface with agricultural and industrial societies *The Sino-Tibetan Languages* Graham Thurgood, Randy J. LaPolla, 2016-12-08 There are more native speakers of Sino Tibetan languages than of any other language family in the world Our records of these languages are among the oldest for any human language and the amount of active research on them has multiplied in the last few decades Now in its second edition and fully updated to include new research The Sino Tibetan Languages includes overview articles on individual languages with an emphasis on the less commonly described languages as well as descriptions and comments on the subgroups in which they occur There are overviews of the whole family on genetic classification and language contact syntax and morphology and also on word order typology There are also more detailed overview articles on the phonology morphosyntax and writing system of just the Sinitic side of the family Supplementing these overviews are articles on Shanghainese Cantonese and Mandarin dialects Tibeto Burman is reviewed by genetic or geographical sub group with overview articles on some of the major groups and areas and there are also detailed descriptions of 41 individual Tibeto Burman languages written by world experts in the field Designed for students and researchers of Asian languages The Sino Tibetan Languages is a detailed overview of the field This book is invaluable to language students experts requiring concise but thorough information on related languages and researchers working in historical typological and comparative linguistics
