Animals In Danger Rhino Animals In Danger:

Rhinos in Danger Lydia Snyder, 2013-08-01 Don't get in a rhino's way! A charging rhino is one of the most dangerous animals in the world. And it may only attack because it can't see well. Rhinos are named for their horns, but tragically, these horns are the reason all rhino species are threatened or endangered today. Poachers kill the huge beasts for these trophies. Only about 50 Javan rhinos are left. Readers will be inspired to take action to keep these and other rhinos from becoming extinct. *Animals in Danger*, 1974. Discusses some animals that have become extinct, describes various animals throughout the world threatened by the same fate today, and examines what can be done to save them. **Animals That Could Kill**

The book reveals how an animal's perceived dangerousness is not an intrinsic trait but a product of its biology, environment, and interactions with humans. It highlights intriguing facts, such as the sophisticated venom delivery systems of some snakes and the complex predator-prey dynamics in extreme environments. This book uniquely blends zoology, ecology, and conservation, offering a balanced portrayal of risk grounded in scientific research. It emphasizes the importance of

understanding animal borne diseases and promoting coexistence Beginning with core concepts of animal biology the book progresses to detailed profiles of specific animals grouped by habitat and mode of harm Finally it investigates the influence of extreme environments and concludes with practical applications in conservation public health and risk management
