At the crossroads of several disciplines film media new media media anthropology visual arts contemporary China area studies and cultural studies this book reveals the existence of a creative humorous but also socially and politically critical China on video which locates itself outside of the intellectual discourse surrounding both auteur cinema and digital art. By describing smaller screen movies moviemaking and viewing as light realities Voci points to their insignificant weight in terms of production costs distribution size profit gains intellectual or artistic ambitions but also their deep meaning in defining an alternative way of seeing and understanding the world. The author proposes that lightness is a concept that can usefully be deployed to describe the moving image beyond the specificity of recent new media developments and which can in fact help us rethink previous cinematic practices in broad terms both spatially and temporally.

Studies Reader brings together both key writings within animation studies and new material in emerging areas of the field. The collection provides readers with seminal texts that ground animation studies within the contexts of theory and aesthetics, form and genre, and issues of representation. The first section collates key readings on animation theory on how we might conceptualise animation and on some of the fundamental qualities of animation. New material is also introduced in this section specifically addressing questions raised by the nature, style, and materiality of animation. The second section outlines some of the main forms that animation takes, which includes discussions of genre. Although this section cannot be exhaustive, the material chosen is particularly useful as it provides samples of analysis that can illuminate some of the issues the first section of the book raises. The third section focuses on issues of representation and how the medium of animation might have an impact on how bodies, gender, sexuality, race, and ethnicity are represented. These representations can only be read through an understanding of the questions that the first two sections of the book raise; we can only decode these representations if we take into account form and genre and theoretical conceptualisations such as visual pleasure, spectacle, the uncanny, realism, etc.

The Palgrave Handbook of Music and Sound in Japanese Animation Marco Pellitteri, 2024-09-13. This handbook fills a substantial gap in the international academic literature on animation, at large, on music studies, and on the aural dimensions of Japanese animation, more specifically. It offers a unique contribution at the intersection between music and popular culture studies, on the one hand, and research on Japanese animated productions, often called anime, as popular art forms and formats of entertainment, on the other. The book is designed as a reference work consisting of an organic sequence of theory-grounded essays on the development of music, sounds, and voices in Japanese animation for cinema and television since the 1930s. Each chapter deals with a phase of this history, focusing on composers and performers, films, series, and genres used in the soundtracks for animations made in Japan. The chapters also offer valuable interviews with prominent figures of music in Japanese animation, as well as chapter boxes clarifying specific aspects.
