Nature's Ghosts Mark V. Barrow,2024-05-31 The rapid growth of the American environmental movement in recent decades obscures the fact that long before the first Earth Day and the passage of the Endangered Species Act naturalists and concerned citizens recognized and worried about the problem of human caused extinction As Mark V Barrow reveals in *Nature s Ghosts* the threat of species loss has haunted Americans since the early days of the republic From Thomas Jefferson s day when the fossil remains of such fantastic lost animals as the mastodon and the woolly mammoth were first reconstructed through the pioneering conservation efforts of early naturalists like John James Audubon and John Muir Barrow shows how Americans came to understand that it was not only possible for entire species to die out but that humans themselves could be responsible for their extinction With the destruction of the passenger pigeon and the precipitous decline of the bison professional scientists and wildlife enthusiasts alike began to understand that even very common species were not safe from the juggernaut of modern industrial society That realization spawned public education and legislative campaigns that laid the foundation for the modern environmental movement and the preservation of such iconic creatures as the bald eagle the California condor and the whooping crane A sweeping beautifully illustrated historical narrative that unites the fascinating stories of endangered animals and the dedicated individuals who have studied and struggled to protect them *Nature s Ghosts* offers an unprecedented view of what we ve lost and a stark reminder of the hard work of preservation still ahead

Deep Things Out of Darkness John G. T. Anderson,2013 Natural history the deliberate observation of the environment is arguably the oldest science From purely practical beginnings as a way of finding

food and shelter natural history evolved into the holistic systematic study of plants animals and the landscape This book chronicles the rise decline and ultimate revival of natural history within the realms of science and public discourse It charts the journey of the naturalist s endeavour from prehistory to the present underscoring the need for natural history in an era of dynamic environmental change

At Home in the World Kathleen A. Cairns,2021-05 At Home in the World examines the extraordinary and largely unheralded role women played in forging the modern environmental movement specifically in California

The Unnaming of Kroeber Hall Andrew Garrett,2023-12-12 A critical examination of the complex legacies of early Californian anthropology and linguistics for twenty first century communities In January 2021 at a time when many institutions were reevaluating fraught histories the University of California removed anthropologist and linguist Alfred Kroeber s name from a building on its Berkeley campus Critics accused Kroeber of racist and dehumanizing practices that harmed Indigenous people university leaders repudiated his values In The Unnaming of Kroeber Hall Andrew Garrett examines Kroeber s work in the early twentieth century and his legacy today asking how a vigorous opponent of racism and advocate for Indigenous rights in his own era became a symbol of his university s failed relationships with Native communities Garrett argues that Kroeber s most important work has been overlooked his collaborations with Indigenous people throughout California to record their languages and stories The Unnaming of Kroeber Hall offers new perspectives on the early practice of anthropology and linguistics and on its significance today and in the future Kroeber s documentation was broader and more collaborative and multifaceted than is usually recognized As a result the records Indigenous people created while working with him are relevant throughout California as communities revive languages names songs and stories Garrett asks readers to consider these legacies arguing that the University of California chose to reject critical self examination when it unnamed Kroeber Hall
