Annual Review Of Plant Physiology Volume 38 1987:

Advances in Selected Plant Physiology Aspects Giuseppe Montanaro, 2012-04-25 The book provides general principles and new insights of some plant physiology aspects covering abiotic stress plant water relations mineral nutrition and reproduction Plant response to reduced water availability and other abiotic stress e g metals have been analysed through changes in water absorption and transport mechanisms as well as by molecular and genetic approach A relatively new aspects of fruit nutrition are presented in order to provide the basis for the improvement of some fruit quality traits The involvement of hormones nutritional and proteomic plant profiles together with some structure function of sexual components have also been addressed Written by leading scientists from around the world it may serve as source of methods theories ideas and tools for students researchers and experts in that areas of plant physiology

The 1992 Shuttle Small Payloads Symposium Lawrence R. Thomas, 1992 The Shuttle Small Payloads Symposium is a continuation of the Get Away Special Symposium and is proposed to continue as an annual conference The focus of this conference is to educate potential Space Shuttle Payload Bay users as to the types of carrier systems provided and for current users to share experiment concepts

Plants for Toxicity Assessment Wun-cheng Wang, Joseph W. Gorsuch, W. R. Lower, 1990 The First Symposium on Use of Plants for Toxicity Assessment was held in Atlanta Georgia on April 19 20 1989 This publication contains 29 refereed papers divided into six groups Regulatory Perspectives Comparative Toxicology Plants and Xenobiotic Uptake Plants and Air Pollution General Phytotoxicology and New Approaches The 2nd Symposium on Use of Plants for Toxicity Assessment was held in San Francisco California on April 23 24 1990 This publication contains 35 refereed papers divided into six groups Regulatory Perspectives Applications of Plant Bioassays Photosynthesis Xenobiotic Uptake by Plants General Phytotoxicology Biochemical and Genetic Applications and New Approaches

Embryogenesis Ken-Ichi Sato, 2012-04-20 The book Embryogenesis is a compilation of cutting edge views of current trends in modern developmental biology focusing on gametogenesis fertilization early and or late embryogenesis in animals plants and some other small organisms Each of 27 chapters contributed from the authorships of world wide 20 countries provides an introduction as well as an in depth review to classical as well as contemporary problems that challenge to understand how living organisms are born grow and reproduce at the levels from molecule and cell to individual

Physicochemical and Plant Physiology Park Nobel, 2012-12-02 Physicochemical and Environmental Plant Physiology provides an understanding of various areas of plant physiology in particular and physiology in general Elementary chemistry physics and mathematics are used to explain and develop concepts The first three chapters of the book describe water relations and ion transport for plant cells The next three chapters cover the properties of light and its absorption the features of chlorophyll and the accessory pigments for photosynthesis that allow plants to convert radiant energy from the sun into chemical energy and how much energy is

actually carried by the compounds ATP and NADPH The last three chapters consider the various forms in which energy and matter enter and leave a plant as it interacts with its environment These include the physical quantities involved in energy budget analysis the resistances affecting the movement of both water vapor and carbon dioxide in leaves and the movement of water from the soil through the plant to the atmosphere

Biophysical Thermodynamics of Intracellular Processes

Lev A. Blumenfeld, Alexander N. Tikhonov, 2012-12-06 This book is aimed at a large audience from students who have a high school background in physics mathematics chemistry and biology to scientists working in the fields of biophysics and biochemistry The main aim of this book is to attempt to describe in terms of physical chemistry and chemical physics the peculiar features of machines having molecular dimensions which play a crucial role in the most important biological processes viz energy transduction and enzyme catalysis One of the purposes of this book is to analyze the physical background of the high efficiency of molecular machines functioning in the living cell This book begins with a brief review of the subject Chapter 1 Macromolecular energy transducing complexes operate with thermal chemical and mechanical energy therefore the appropriate framework to discuss the functioning of biopolymers comes from thermodynamics and chemical kinetics That is why we start our analysis with a consideration of the conventional approaches of thermodynamics and classical chemical kinetics and their application to the description of bioenergetic processes Chapter 2 Critical analysis of these approaches has led us to the conclusion that the conventional approaches of physical chemistry to the description of the functioning of individual macromolecular devices in many cases appear to be incomplete This prompted us to consider the general principles of living machinery from another point of view

Physicochemical and Environmental Plant

Physiology Park S. Nobel, 2012-12-02 This text is the successor volume to Biophysical Plant Physiology and Ecology W H Freeman 1983 The content has been extensively updated based on the growing quantity and quality of plant research including cell growth and water relations membrane channels mechanisms of active transport and the bioenergetics of chloroplasts and mitochondria One third of the figures are new or modified over 190 new references are incorporated the appendixes on constants and conversion factors have doubled the number of entries and the solutions to problems are given for the first time Many other changes have emanated from the best laboratory for any book the classroom Covers water relations and ion transport for plant cells diffusion chemical potential gradients solute movement in and out of plant cells Covers interconnection of various energy forms light chlorophyll and accessory photosynthesis pigments ATP and NADPH Covers forms in which energy and matter enter and leave a plant energy budget analysis water vapor and carbon dioxide water movement from soil to plant to atmosphere
