Annual Review Of Ecology And Systematics Vol 11:

Ecology, Sustainable Development and Accounting Seleshi Sisaye, 2015-08-11 Accounting literature has viewed sustainability in terms of social economic and environmental performances. There have been concerns that the relationship between sustainability accounting and organizational performance cannot be explained unless we can deduce patterns of administrative behaviour that chronicle management practices. Ecology Sustainable Development and Accounting argues that despite the broader social and economic development dimensions of sustainability and the limitations of its extension to corporate and organizational behaviour, an ecological framework is capable of providing the overall societal and community chronologies that describe corporate sustainable operations. Drawing examples from international development and federal government organizations, this book documents the link between ecology, corporate sustainable development and sustainability accounting and reporting. It draws together the literature from several disciplines to elaborate the contribution of the ecological approach to sustainable development in the accounting literature. This book will be of particular interest to students, academics and practitioners in the areas of environmental studies, ecological economics, sustainable development studies and social and environmental accounting. The sociological and anthropological perspectives make this book the first of its kind to apply the population ecology of sociology to both the sustainability and accounting literature. The Economics of Ecosystems and Biodiversity: Ecological and Economic Foundations Pushpam Kumar, 2012-12-20 Human well-being relies critically on ecosystem services provided by nature. Examples include water and air quality regulation, nutrient cycling and decomposition, plant pollination and flood control, all of which are dependent on biodiversity. They are predominantly public goods with limited or no markets and do not command any price in the conventional economic system, so their loss is often not detected and continues unaddressed and unabated. This in turn not only impacts human well-being but also seriously undermines the sustainability of the economic system. It is against this background that TEEB The Economics of Ecosystems and Biodiversity project was set up in 2007 and led by the United Nations Environment Programme to provide a comprehensive global assessment of economic aspects of these issues. This book, written by a team of international experts, represents the scientific state of the art, providing a comprehensive assessment of the fundamental ecological and economic principles of measuring and valuing ecosystem services and biodiversity and showing how these can be mainstreamed into public policies. This volume and subsequent TEEB outputs will provide the authoritative knowledge and guidance to drive forward the biodiversity conservation agenda for the next decade. Colombo,2023-07-31 Evolution and the Human Animal Drive to Conflict examines how fundamental universal animal drives such as dominance prevalence survival kinship and profit greed advantage whether of material or social nature provide the basis for the evolutionary trap that promotes the unstable conflictive dominant prone individual and group human behaviours Examining this behavioural tension this book argues that while these innate features set up behaviours that lean towards aggression influenced by social inequalities the means implemented to defuse them resort to emotional and intellectual strategies that sponsor fanaticism and often reproduce the very same behaviours they intend to defuse In addressing these concerns the book argues that we should enhance our resources to promote solidarity accept cultural differences deter expansionist and uncontrolled profit drives and achieve collective access towards knowledge and progress in living conditions This entails promoting the redistribution of resources and creative labour access and avoiding policies that generate a fragmented world with collective and individual development disparities that invite and encourage dominance behaviours This resource redistribution asserts that it is necessary to reformulate the global set of human priorities towards increased access to better living conditions cognitive enhancement a more amiable interaction with the ecosystem and non aggressive cultural differences promote universal access to knowledge and enhance creativity and cultural convivence These behavioural changes entail partial derangement of our ancestral animal drives camouflaged under different cultural profiles

until the species succeeds in replacing the dominance of basic animal drives with prosocial collective ones Though it entails a formidable task of confronting financial military and religious powers and cultural inertias human history is also a challenging continuous experience in these domains for the sake of our own self identity and self evaluation we should reject any suggestion of not continuing embracing slowly constructing collective utopias channelled towards improving individual and collective freedom and creativeness This book will interest academics and students in social cognitive and evolutionary psychology the neurosciences palaeoanthropology philosophy and anthropology

Ecosystem Services from Agriculture and Agroforestry Bruno Rapidel, Fabrice DeClerck, Jean Francois Le Coq, John Beer, 2012-06-25 Agricultural systems are no longer evaluated solely on the basis of the food they provide but also on their capacity to limit impacts on the environment such as soil conservation water quality and biodiversity conservation as well as their contribution to mitigating and adapting to climate change In order to cope with these multiple service functions they must internalize the costs and benefits of their environmental impact Payments for ecosystem services are hoped to encourage and promote sustainable practices via financial incentives The authors show that while the principle is straightforward the practice is much more complicated Whereas scenic beauty and protection of water sources provide benefits to the local population carbon sequestration and biodiversity conservation can be considered international public goods rendering potential payment schemes more complex Few examples exist where national or international bodies have been able to set up viable mechanisms that compensate agricultural systems for the environmental services they provide However this book provides several examples of successful programs and aims to transfer them to other regions of the world The authors show that a product can be sold if it is clearly quantified there exists a means to determine the service s values and there is a willing buyer The first two sections of the book present methodological issues related to the quantification and marketing of ecosystem services from agriculture including agroforestry The third and final section presents case studies of practical payments for ecosystem services and experiences in Central and South America and draws some lessons learnt for effective and sustainable development of ecosystem services compensation mechanisms
