Photography Theory James Elkins, 2013-10-18 Photography Theory presents forty of the world's most active art historians and theorists including Victor Burgin Joel Snyder Rosalind Krauss Alan Trachtenberg Geoffrey Batchen Carol Squiers Margaret Iversen and Abigail Solomon Godeau in animated debate on the nature of photography Photography has been around for nearly two centuries but we are no closer to understanding what it is For some people a photograph is an optically accurate impression of the world for others it is mainly a way of remembering people and places Some view it as a sign of bourgeois life a kind of addiction of the middle class whilst others see it as a troublesome interloper that has confused people's ideas of reality and fine art to the point that they have difficulty even defining what a photograph is For some the whole question of finding photography's nature is itself misguided from the beginning This provocative second volume in the Routledge The Art Seminar series presents not one but many answers to the question what makes a photograph a photograph

Holographic Recording Materials H.M. Smith,2006-01-21 With contributions by numerous experts Remote Sensing for Environmental Sciences E. Schanda,2012-12-06 The public's serious concern about the uncertainties and dangers of the consequences of human activities on environmental quality demands policies to control the situation and to prevent its deterioration But far reaching decisions on the environmental policy are impaired or even made impossible as long as the relevant ecological relations are not sufficiently understood and large scale quantitative information on the most important parameters is not available in sufficient quality and quantity The techniques of remote sensing offer new ways of procuring data on natural phenomena with three main advantages the large distance between sensor and object prevents interference with the environmental conditions to be measured the potentiality for large scale and even global surveys yields a new dimension for the investigations of the environmental parameters the extremely wide spectral range covered by the whole diversity of sensors discloses many properties of the environmental media not detectable within a single wave band as e.g. the visible These significant additions to the conventional methods of environmental studies and the particular qualification of several remote sensing methods for quantitative determination of the natural parameters makes this new investigation technique an important tool both to the scientists studying the ecological relationship and the administration in charge of the environmental planning and protection **Basics Creative Photography 03: Behind the Image** Anna Fox,Natasha Caruana,2012-05-24 Research Methods is a lively exploration of how to undertake research It brings together a wide range of different approaches and invites learners to consider innovative approaches to the way they work Measurement, Instrumentation, and Sensors Handbook, Second Edition John G.
