Multicomponent Polymer Materials Donald R. Paul, 1986

Smart Hydrogel Modelling Hua Li, 2010-01-26 The science of mathematical modelling and numerical simulation is generally accepted as the third mode of scientific discovery with the other two modes being experiment and analysis making this field an integral component of cutting edge scientific and industrial research in most domains This is especially so in advanced biomaterials such as polymeric hydrogels responsive to biostimuli for a wide range of potential BioMEMS applications where multiphysics and multiphase are common requirements These environmental stimuli responsive hydrogels are often known as smart hydrogels In the published studies on the smart or stimuli responsive hydrogels the literature search clearly indicates that the vast majority are experimental based In particular although there are a few published books on the smart hydrogels none is involved in the modelling of smart hydrogels For the few published journal papers that conducted mathematical modelling and numerical simulation results were far from satisfactory and showed significant discrepancies when compared with existing experimental data This has resulted in ad hoc studies of these hydrogel materials mainly conducted by trial and error This is a very time consuming and inefficient process and certain aspects of fundamental knowledge are often missed or overlooked resulting in off tangent research directions
