Approaches to the Study of Political Science Michael Haas, Henry S. Kariel, 1970 Cover title *Approaches to the Study of Politics* Bernard Susser, 1992 Problems and Methods in the Study of Politics Ian Shapiro, Rogers M. Smith, Tarek E. Masoud, 2004-09-09 The study of politics seems endlessly beset by debates about method At the core of these debates is a single unifying concern should political scientists view themselves primarily as scientists developing ever more sophisticated tools and studying only those phenomena to which such tools may fruitfully be applied Or should they instead try to illuminate the large complicated untidy problems thrown up in the world even if the chance to offer definitive explanations is low Is there necessarily a tension between these two endeavours Are some domains of political inquiry more amenable to the building up of reliable scientific knowledge than others and if so how should we deploy our efforts In this book some of the world's most prominent students of politics offer original discussions of these pressing questions eschewing narrow methodological diatribes to explore what political science is and how political scientists should aspire to do their work

C. Johari,1982 Scientific Approaches to the Study of International Relations Jan-Henrik Petermann,2011-11-21 Essay from the year 2006 in the subject Politics General and Theories of International Politics London School of Economics Department of International Relations language English abstract Since the behaviourist turn of the 1960s questions concerning the appropriateness and desirability of a positivist research agenda have been at the forefront of meta methodological debate within the social sciences The evolving science wars between positivists and normativists have also presented enormous challenges to the epistemological identities and professional self images of scholars working in the academic field of International Relations IR Whereas positivists maintain that the overarching aim of science is the experimentally guided explanation of empirical phenomena under covering laws normativists and traditionalists hold that social scientists cannot and in fact should not emulate the causal models of the natural sciences According to this view it is virtually impossible to study the influences of distinct variables in complex social interactions and statistical aggregation merely obscures the fact that the true causes of events are rarely obvious in the social world Hence the purpose of political and social research ought to be a desire to understand processes from within rather than to explain them from outside Yet the traditionalist critique of social scientific positivism did not imply that positivists would be entirely oblivious to the importance of norms in international life IR does not only deal with descriptive but with political and ultimately prescriptive aspects of the social world Thus it might appear worthwhile to ask how scientific are so called scientific positivist approaches to the study of IR if their theoretical premises and empirical achievements are taken at face value and judged by their own standards of scientific neutrality and precision To answer this

question I will first describe the spread of positivist thought in IR Secondly I will outline in how far two research programmes which have been heavily influenced by positivist method game theory and the democratic peace thesis have challenged traditionalist approaches and whether they can be regarded as truly scientific Drawing on these insights I will conclude that on closer inspection positivist research methods in IR do lack a perfectly scientific status although they have made important contributions to the academic field
