Archaeology A Cultural Evolutionary Approach:

Archaeology, a Cultural-evolutionary Approach Frank W. Eddy, 1984 **Handbook of Evolutionary Research in Archaeology** Anna Marie Prentiss, 2019-06-03 Evolutionary Research in Archaeology seeks to provide a comprehensive overview of contemporary evolutionary research in archaeology The book will provide a single source for introduction and overview of basic and advanced evolutionary concepts and research programs in archaeology Content will be organized around four areas of critical research including microevolutionary and macroevolutionary process human ecology studies evolutionary ecology demography and niche construction and evolutionary cognitive archaeology Authors of individual chapters will address theoretical foundations history of research contemporary contributions and debates and implications for the future for their respective topics As appropriate authors present or discuss short empirical case studies to illustrate key arguments **Applying Evolutionary Archaeology** Michael J. O'Brien, R. Lee Lyman, 2000-03-31 Anthropology and by extension archaeology has had a long standing interest in evolution in one or several of its various guises Pick up any lengthy treatise on humankind written in the last quarter of the nineteenth century and the chances are good that the word evolution will appear somewhere in the text If for some reason the word itself is absent the odds are excellent that at least the concept of change over time will have a central role in the discussion After one of the preeminent and often vilified social scientists of the nineteenth century Herbert Spencer popularized the term in the 1850s evolution became more or less a household word usually being used synonymously with change albeit change over extended periods of time Later through the writings of Edward Burnett Tylor Lewis Henry Morgan and others the notion of evolution as it applies to stages of social and political development assumed a prominent position in anthropological discussions To those with only a passing knowledge of American anthropology it often appears that evolutionism in the early twentieth century went into a decline at the hands of Franz Boas and those of similar outlook often termed particularists However it was not evolutionism that was under attack but rather comparativism an approach that used the ethnographic present as a key to understanding how and why past peoples lived the way they did Boas 1896 Lithic Technological Systems and Evolutionary Theory Society for American Archaeology. Annual Meeting, 2015-01-22 This collection of essays brings together several different evolutionary perspectives to demonstrate how lithic technological systems are a byproduct of human behavior The essays cover a range of topics including human behavioral ecology cultural transmission phylogenetic analysis macroevolution and various applications of evolutionary ecology **Theory in Archaeology** Peter J. Ucko, 2005-08-10 A unique volume that brings together contributors from all over the world to provide the first truly global perspective on archaeological theory and tackle the crucial questions facing archaeology in the 1990s Can one practice without theory **Advances in Archaeological Method and Theory** Michael B. Schiffer, 2014-05-19 Selections for Students from Volumes 1-4 **Pattern and Process in Cultural Evolution** Stephen Shennan, 2009-03-31 This volume offers an integrative approach to the application of

evolutionary theory in studies of cultural transmission and social evolution and reveals the enormous range of ways in which Darwinian ideas can lead to productive empirical research the touchstone of any worthwhile theoretical perspective While many recent works on cultural evolution adopt a specific theoretical framework such as dual inheritance theory or human behavioral ecology Pattern and Process in Cultural Evolution emphasizes empirical analysis and includes authors who employ a range of backgrounds and methods to address aspects of culture from an evolutionary perspective Editor Stephen Shennan has assembled archaeologists evolutionary theorists and ethnographers whose essays cover a broad range of time periods localities cultural groups and artifacts

Archaeological Theory Matthew Johnson, 2011-09-09 Archaeological Theory 2nd Edition is the most current and comprehensive introduction to the field available Thoroughly revised and updated this engaging text offers students an ideal entry point to the major concepts and ongoing debates in archaeological research New edition of a popular introductory text that explores the increasing diversity of approaches to archaeological theory Features more extended coverage of traditional or culture historical archaeology Examines theory across the English speaking world and beyond Offers greatly expanded coverage of evolutionary theory divided into sociocultural and Darwinist approaches Includes an expanded glossary bibliography and useful suggestions for further readings [Culture History and Convergent Evolution](#) Huw S. Groucutt, 2020-07-23 This volume brings together diverse contributions from leading archaeologists and paleoanthropologists covering various spatial and temporal periods to distinguish convergent evolution from cultural transmission in order to see if we can discover ancient human populations With a focus on lithic technology the book analyzes ancient materials and cultures to systematically explore the theoretical and physical aspects of culture convergence and populations in human evolution and prehistory The book will be of interest to academics students and researchers in archaeology paleoanthropology genetics and paleontology The book begins by addressing early prehistory discussing the convergent evolution of behaviors and the diverse ecological conditions driving the success of different evolutionary paths Chapters discuss these topics and technology in the context of the Lower Paleolithic Earlier Stone age and Middle Paleolithic Middle Stone Age The book then moves towards a focus on the prehistory of our species over the last 40 000 years Topics covered include the human evolutionary and dispersal consequences of the Middle Upper Paleolithic Transition in Western Eurasia Readers will also learn about the cultural convergences and divergences that occurred during the Terminal Pleistocene and Holocene such as the budding of human societies in the Americas The book concludes by integrating these various perspectives and theories and explores different methods of analysis to link technological developments and cultural convergence

[Investigating Archaeological Cultures](#) Benjamin W. Roberts, Marc Vander Linden, 2011-06-04 Defining culture is an important step in undertaking archaeological research Any thorough study of a particular culture first has to determine what that culture contains what particular time period geographic region and group of people make up that culture The study of archaeology has many accepted definitions of particular cultures but recently these accepted definitions

have come into question As archaeologists struggle to define cultures they also seek to define the components of culture This volume brings together 21 international case studies to explore the meaning of culture for regions around the globe and periods from the Paleolithic to the Bronze Age and beyond Taking lessons and overarching themes from these studies the contributors draw important conclusions about cultural transmission technology development and cultural development The result is a comprehensive model for approaching the study of culture broken down into regions Russia Continental Europe North America Britain and Africa materials Lithics Ceramics Metals and time periods This work will be valuable to all archaeologists and cultural anthropologists particularly those studying material culture **Evolutionary and Interpretive Archaeologies** Andrew Gardner,2011-06 This collection of original articles compares various key archaeological topics agency violence social groups diffusion from evolutionary and interpretive perspectives These two strands represent the major current theoretical poles in the discipline By comparing and contrasting the insights they provide into major archaeological themes this volume demonstrates the importance of theoretical frameworks in archaeological interpretations Chapter authors discuss relevant Darwinian or interpretive theory with short archaeological and anthropological case studies to illustrate the substantive conclusions produced The book will advance debate and contribute to a better understanding of the goals and research strategies that comprise these distinct research traditions **Archaeological Theory and the Politics of Cultural Heritage** Laurajane Smith,2004-08-02 This controversial book is a survey of how relationships between indigenous peoples and the archaeological establishment have got into difficulty and a crucial pointer to how to move forward from this point With lucid appraisals of key debates such as NAGPRA Kennewick and the repatriation of Tasmanian artefacts Laurajane Smith dissects the nature and consequences of this clash of cultures Smith explores how indigenous communities in the USA and Australia have confronted the pre eminence of archaeological theory and discourse in the way the material remains of their past are cared for and controlled and how this has challenged traditional archaeological thought and practice Essential reading for all those concerned with developing a just and equal dialogue between the two parties and the role of archaeology in the research and management of their heritage **The Archaeology of Island Colonization** Matthew F. Napolitano,Jessica H. Stone,Robert J. DiNapoli,2021-05-25 This volume details how new theories and methods have recently advanced the archaeological study of initial human colonization of islands around the world including in the southwest Pacific the Mediterranean the Caribbean and Southeast Asia This global perspective brings into comparison the wide variety of approaches used to study these early migrations and illuminates current debates in island archaeology Evidence of island colonization is often difficult to find especially in areas impacted by sea level rise and these essays demonstrate how researchers have tackled this and other issues Contributors show the potential of computer simulations of voyaging in determining the range of timing and origin points that were possible in the past They discuss how Bayesian modeling helps address uncertainties and controversies surrounding radiocarbon dating Additionally advances in

biomolecular techniques such as ancient DNA aDNA paleoproteomics analysis of human microbiota and improved resolution in isotopic analyses are providing more refined information on the homelands of initial settlers on individual life courses and on population level migrations Islands offer rich opportunities to examine the exploratory nature of the human species providing insights into the evolution of watercraft technologies and wayfinding the impact of humans on their new environments and the motivations for their journeys The Archaeology of Island Colonization represents the innovative ways today s archaeologists are reconstructing these unique paleolandscapes Contributors Nasullah Aziz David Ball Todd J Braje Richard Callaghan John F Cherry Ethan Cochrane Robert J DiNapoli Andrew Dugmore Jon M Erlandson Scott M Fitzpatrick Amy E Gusick Derek Hamilton Terry L Hunt Thomas P Leppard Carl P Lipo Jillian Maloney Matthew F Napolitano Anthony Newton Maria A Nieves Col n Rintaro Ono Adhi Agus Oktaviana Timothy Rieth Curtis Runnels Magdalena M E Schmid Alexander J Smith Harry Octavianus Sofian Sriwigati Jessica H Stone Orri V steinsson A volume in the series Society and Ecology in Island and Coastal Archaeology edited by Victor D Thompson **Oxford Handbook of Cultural Evolution** Jamshid Tehrani, Rachel L. Kendal, Jeremy Kendal, 2025-07-16 This handbook offers a comprehensive overview of the interdisciplinary field of Cultural Evolution which has in recent years matured into an increasingly diverse and wide reaching but intellectually coherent research programme The book showcases the disciplinary spectrum of research into Cultural Evolution from primatology and medieval literature to gene culture co evolution computer science anthropology archaeology and experimental psychology The handbook consists of review essays contributed by leading experts in their areas structured into ten sections covering key approaches and debates major themes and real world applications Taken together the essays offer an exceptionally broad and forward looking perspective on the field for researchers across the cognitive and evolutionary social sciences including those working in fields adjacent to Cultural Evolution such as Behavioural Ecology Evolutionary Psychology and Digital Humanities The handbook also provides a unique educational resource for students and teachers seeking to integrate Cultural Evolution into undergraduate and postgraduate curricula as well as highlighting some of the potential applications of Cultural Evolution in fields such as education public health and environmental policy

Archaeology Brian M. Fagan, 2016 **Archaeological Thought in America** C. C. Lamberg-Karlovsky, 1989 American archaeology today encompasses a huge range of approaches and draws eclectically on a multitude of academic disciplines Until now however there has been no book seeking to separate the main strands and traditions of research and present a rounded picture of American archaeological thought in all its diversity The seventeen essays in Archaeological Thought in America describe recent theoretical advances and present substantive interpretations of prehistoric data drawn from a variety of cultures and time frames including Mesoamerica Central Asia India and China The contributors include many of the leading North American archaeologists of this generation **Archaeological Method and Theory** Linda Ellis, 2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are

too often and inconveniently treated in separate publications. It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research. Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials. Thus the reader will find entries on subject matter covering disciplinary theory, legislation affecting the work of archaeologists, pre-excavation surveying, excavation methodology, on-site conservation techniques, post-excavation analysis. The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources. Here the latest refinements in techniques such as radiometric dating, stable isotopic analysis, and the PCR technique of DNA analysis are presented clearly and authoritatively. The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences. Cultural property legislation, regardless of its country of origin, has affected how archaeologists conduct their work. This encyclopedia covers all major U.S. legislation developed for the protection of cultural property, including the recent Native American Graves Protection and Repatriation Act, and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology. Without some sort of conservation program at the point of excavation, valuable materials may be inadvertently contaminated or destroyed. Many simple and low-cost techniques to promote both sample integrity and long-term preservation for major classes of materials are described in this volume. Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range. This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology, Industrial Archaeology, Medieval Archaeology, and Classical Archaeology.

Time, Process and Structured Transformation in Archaeology James McGlade, Sander E. van der Leeuw, 2013-10-16
 In a discipline which essentially studies how modern man came to be, it is remarkable that there are hardly any conceptual tools to describe change. This is due to the history of the western intellectual and scientific tradition which for a long time favoured mechanics over dynamics and the study of stability over that of change. Change was primarily deemed due to external events in archaeology, mainly climatic or environmental. Revolutionary innovations in the natural and life sciences often erroneously referred to as chaos theory suggest that there are ways to overcome this problem. A wide range of processes can be described in terms of dynamic systems, and modern computing methods enable us to investigate many of their properties. This volume presents a cogent argument for the use of such approaches and a discussion of a number of its aspects by a range of scientists from the humanities, social and natural sciences, and archaeology.

 Drawing on Kent Flannery's forty years of cross-cultural research in the area, the contributors to this collection reflect the current diversity of contemporary approaches to the study of cultural

evolutionary processes Collectively the volume expresses the richness of the issues being investigated by comparative theorists interested in long term change as well as the wide variety of data approaches and ideas that researchers are employing to examine these questions
