10th European Conference on Mixing Harry E.A. Van den Akker, J.J. Derksen, 2000-06-14 Traditionally fluid mixing and the related multiphase contacting processes have always been regarded as an empirical technology Many aspects of mixing dispersing and contacting were related to power draw but understanding of the phenomena was limited or qualitative at the most In particular during the last decade however plant operation targets have tightened and product specifications have become stricter The public awareness as to safety and environmental hygiene has increased The drive towards larger degrees of sustainability in the process industries has urged for lower amounts of solvents and for higher yields and higher selectivities in chemical reactors All this has resulted in a market pull the need for more detailed insights in flow phenomena and processes and for better verifiable design and operation methods Developments in miniaturisation of sensors and circuits as well as in computer technology have rendered leaps possible in computer simulation and animation and in measuring and monitoring techniques This volume encourages a leap forward in the field of mixing by the current overwhelming wealth of sophisticated measuring and computational techniques This leap may be made possible by modern instrumentation signal and data analysis field reconstruction algorithms computational modelling techniques and numerical recipes

Process Analytical Technology Katherine A. Bakeev, 2008-04-15 The use of real or near real time measurement of chemical production process parameters as the basis for achieving control or optimisation of a manufacturing process has wide application in the petrochemical food and chemical industries Process analytical chemistry PAC or process analytical technology PAT as it has recently been called is now being

deployed in the pharmaceutical industry where it is seen as a technology that can help companies to improve their conformity with manufacturing compliance regulations The objective of this book is to provide a starting point for implementing process analytical chemistry tools in process monitoring applications or as part of a total quality management system Written from the perspective of the spectroscopist required to implant PAT tools in a process environment attention is focussed on measurements that are made in process at line or off line providing data on product during manufacture With chapters covering the key spectroscopic tools their applications in the pharmaceutical and chemical industries and basic chemometrics the novice can quickly develop a sound understanding of the most practical technologies and applications Implementation strategies are fully covered and address some of the critical issues that need to be tackled when setting up a PAT project including choosing a project with a sound business justification in the first place
