The 1702 Chair of Chemistry at Cambridge Mary D. Archer, Christopher D. Haley, 2005-01-06 A history of the 1702 chair in chemistry at the University of Cambridge Chemistry at Oxford Robert Joseph Paton Williams, Allan Chapman, John Shipley Rowlison, 2009 Chemistry in various ways has been pursued in Oxford by Oxford figures and within the wider remit of the University for centuries This fascinating book provides a history of the development of the Oxford Chemistry School from 1600 to 2008 and shows how the nature of the University and individuals have shaped the school and advanced the subject of chemistry It is the only complete history of Oxford chemistry in print and chronologically follows the progress of the researchers Robert Boyle Robert Hooke and the Royal Society groups of the 1650 s as well as 18th 19th and 20th century developments Transformations of Electricity in Nineteenth-Century Literature and Science Stella Pratt-Smith, 2017-05-15 Throughout the nineteenth century practitioners of science writers of fiction and journalists wrote about electricity in ways that defied epistemological and disciplinary boundaries Revealing electricity as a site for intense and imaginative Victorian speculation Stella Pratt Smith traces the synthesis of nineteenth century electricity made possible by the powerful combination of science literature and the popular imagination With electricity resisting clear description even by those such as Michael Faraday and James Clerk Maxwell who knew it best Pratt Smith argues that electricity was both metaphorically suggestive and open to imaginative speculation Her book engages with Victorian scientific texts popular and specialist periodicals and the work of leading midcentury novelists including Charles Dickens Charlotte Bronte Emily Bronte William Makepeace Thackeray and Wilkie Collins Examining the work of William Harrison Ainsworth and Edward Bulwer Lytton Pratt Smith explores how Victorian novelists attributed magical qualities to electricity imbuing it with both the romance of the past and the thrill of the future She concludes with a case study of Benjamin Lumley s *Another World* which presents an enticing fantasy of electricity s potential based on contemporary developments Ultimately her book contends that writing and reading about electricity appropriated and expanded its imaginative scope transformed its factual origins and applications and contravened the bounds of literary genres and disciplinary constraints **Compound Histories** , 2017-11-13 *Compound Histories* Materials Governance and Production 1760 1840 offers a new view of the period during which Europe took on its modern character and globally dominant position By exploring the intertwined realms of production governance and materials it places chemists and chemistry at the center of processes most closely identified with the construction of the modern world This includes the interactive intensification of material and knowledge production the growth and management of consumption environmental changes regulation of materials markets landscapes and societies and practices embodied in political economy Rather than emphasize revolutionary breaks and the primacy of innovation driven change the volume highlights the continuities and accumulation of incremental changes that framed historical development Contributors are Robert G W Anderson Bernadette Bensaude Vincent Jos Ram n Bertomeu S nchez John R R Christie Joppe van Driel Frank

A J L James Christine Lehman Lissa L Roberts Thomas le Roux Elena Serrano Anna Simmons Marie Th baud Sorger Sacha Tomic Andreas Weber Simon Werrett **Public Understanding of Science** David Knight, 2006-10-16 First Published in 2006 Routledge is an imprint of Taylor Francis an informa company **Chemistry Department At Imperial College London, The: A History, 1845-2000** Hannah Gay, William Griffith, 2016-11-03 This is the first comprehensive history of the chemistry department at Imperial College London Based on archival records oral testimony published papers published and unpublished memoirs the book tells the story of this world famous department from its foundation as the Royal College of Chemistry in 1845 to the large department it had become by the year 2000 The book covers research teaching departmental governance students and social life It also highlights the extraordinary contributions made to the war effort in both the first and second world wars From its first professors A Wilhelm Hofmann and Edward Frankland the department has been home to many eminent chemists including in the later twentieth century the Nobel laureates Derek Barton and Geoffrey Wilkinson New information on these and many others is presented in a lively narrative that places both people and events in the larger historical contexts of chemistry politics culture and the economy The book will interest not only those connected with Imperial College but anyone interested in chemistry and its history or in higher *Multilingual Practices in Language History* Päivi Pahta, Janne Skaffari, Laura Wright, 2017-12-18 Texts of the past were often not monolingual but were produced by and for people with bi or multilingual repertoires the communicative practices witnessed in them therefore reflect ongoing and earlier language contact situations However textbooks and earlier research tend to display a monolingual bias This collected volume on multilingual practices in historical materials including code switching highlights the importance of a multilingual approach The authors explore multilingualism in hitherto neglected genres periods and areas introduce new methods of locating and analysing multiple languages in various sources and review terminology theories and tools The studies also revisit some of the issues already introduced in previous research such as Latin interacting with European vernaculars and the complex relationship between code switching and lexical borrowing Collectively the contributors show that multilingual practices share many of the same features regardless of time and place and that one way or the other all historical texts are multilingual This book takes the next step in historical multilingualism studies by establishing the relevance of the multilingual approach to understanding language history **Encyclopedia of Early Modern Philosophy and the Sciences** Dana Jalobeanu, Charles T. Wolfe, 2022-08-27 This Encyclopedia offers a fresh integrated and creative perspective on the formation and foundations of philosophy and science in European modernity Combining careful contextual reconstruction with arguments from traditional philosophy the book examines methodological dimensions breaks down traditional oppositions such as rationalism vs empiricism calls attention to gender issues to insiders and outsiders minor figures in philosophy and underground movements among many other topics In addition and in line with important recent transformations in the fields of history of science and early modern philosophy the volume recognizes the specificity and

significance of early modern science and discusses important developments including issues of historiography such as historical epistemology the interplay between the material culture and modes of knowledge expert knowledge and craft knowledge This book stands at the crossroads of different disciplines and combines their approaches particularly the history of science the history of philosophy contemporary philosophy of science and intellectual and cultural history It brings together over 100 philosophers historians of science historians of mathematics and medicine offering a comprehensive view of early modern philosophy and the sciences It combines and discusses recent results from two very active fields early modern philosophy and the history of early modern science Editorial Board EDITORS IN CHIEF Dana Jalobeanu University of Bucharest Romania Charles T Wolfe Ghent University Belgium ASSOCIATE EDITORS Delphine Bellis University Nijmegen The Netherlands Zvi Biener University of Cincinnati OH USA Angus Gowland University College London UK Ruth Hagengruber University of Paderborn Germany Hiro Hirai Radboud University Nijmegen The Netherlands Martin Lenz University of Groningen The Netherlands Gideon Manning CalTech Pasadena CA USA Silvia Manzo University of La Plata Argentina Enrico Pasini University of Turin Italy Cesare Pastorino TU Berlin Germany Lucian Petrescu Universit Libre de Bruxelles Belgium Justin E H Smith University de Paris Diderot France Marius Stan Boston College Chestnut Hill MA USA Koen Vermeir CNRS SPHERE Universit de Paris France Kirsten Walsh University of Calgary Alberta Canada

Chemical History Gerrylyn K Roberts, Colin A Russell, 2007-10-31 This book provides an historical overview of the recent developments in the history of diverse fields within chemistry It follows on from Recent Developments in the History of Chemistry a volume published in 1985 Covering chiefly the last 20 years the primary aim of Chemical History Reviews of the Recent Literature is to familiarise newcomers to the history of chemistry with some of the more important developments in the field Starting with a general introduction and look at the early history of chemistry subsequent chapters go on to investigate the traditional areas of chemistry physical organic inorganic alongside analytical chemistry physical organic chemistry medical chemistry and biochemistry and instruments and apparatus Topics such as industrial chemistry and chemistry in national contexts whilst not featuring as separate chapters are woven throughout the content Each chapter is written by experts and is extensively referenced to the international chemical literature Chemical History Reviews of the Recent Literature is also ideal for chemists who wish to become familiar with historical aspects of their work In addition it will appeal to a wider audience interested in the history of chemistry as it draws together historical materials that are widely scattered throughout the chemical literature

Painting with Fire Matthew C. Hunter, 2020-03-23 Painting with Fire shows how experiments with chemicals known to change visibly over the course of time transformed British pictorial arts of the long eighteenth century and how they can alter our conceptions of photography today As early as the 1670s experimental philosophers at the Royal Society of London had studied the visual effects of dynamic combustibles By the 1770s chemical volatility became central to the ambitious paintings of Sir Joshua Reynolds premier portraitist and first president of Britain s Royal Academy of

Arts Valued by some critics for changing in time and thus for prompting intellectual reflection on the nature of time Reynolds's unstable chemistry also prompted new techniques of chemical replication among Matthew Boulton James Watt and other leading industrialists In turn those replicas of chemically decaying academic paintings were rediscovered in the mid nineteenth century and claimed as origin points in the history of photography Tracing the long arc of chemically produced and reproduced art from the 1670s through the 1860s the book reconsiders early photography by situating it in relationship to Reynolds's replicated paintings and the literal engines of British industry By following the chemicals *Painting with Fire* remaps familiar stories about academic painting and pictorial experiment amid the industrialization of chemical knowledge

Science and Spectacle in the European Enlightenment Bernadette Bensau de-Vincent, 2016-12-05 Air pumps electrical machines colliding ivory balls coloured sparks mechanical planetariums magic mirrors hot air balloons these are just a sample of the devices displayed in public demonstrations of science in the eighteenth century Public and private demonstrations of natural philosophy in Europe then differed vastly from today's unadorned and anonymous laboratory experiments Science was cultivated for a variety of purposes in many different places scientific instruments were built and used for investigative and didactic experiments as well as for entertainment and popular shows Between the culture of curiosities which characterized the seventeenth century and the distinction between academic and popular science that gradually emerged in the nineteenth the eighteenth century was a period when scientific activities took place in a variety of sites ranging from academies and learned societies to salons and popular fairs shops and streets This collection of case studies describing public demonstrations in Britain Germany Italy and France exemplifies the wide variety of settings for scientific activities in the European Enlightenment Filled with sparks and smells the essays raise broader issues about the ways in which modern science established its legitimacy and social acceptability They point to two major features of the cultures of science in the eighteenth century entertainment and utility Experimental demonstrations were attended by apothecaries and craftsmen for vocational purposes At the same time they had to fit in with the taste of both polite society and market culture Public demonstrations were a favourite entertainment for ladies and gentlemen and a profitable activity for instrument makers and booksellers

The University and Its Disciplines Carolin Kreber, 2010-07-15 University teaching and learning take place within ever more specialized disciplinary settings each characterized by its unique traditions concepts practices and procedures It is now widely recognized that support for teaching and learning needs to take this discipline specificity into account However in a world characterized by rapid change complexity and uncertainty problems do not present themselves as distinct subjects but increasingly within trans disciplinary contexts calling for graduate outcomes that go beyond specialized knowledge and skills This ground breaking book highlights the important interplay between context specific and context transcendent aspects of teaching learning and assessment It explores critical questions such as What are the ways of thinking and practicing characteristic of particular disciplines How can students be supported in

becoming participants of particular disciplinary discourse communities Can the diversity in teaching learning and assessment practices that we observe across departments be attributed exclusively to disciplinary structure To what extent do the disciplines prepare students for the complexities and uncertainties that characterize their later professional civic and personal lives Written for university teachers educational developers as well as new and experienced researchers of Higher Education this highly anticipated first edition offers innovative perspectives from leading Canadian US and UK scholars on how academic learning within particular disciplines can help students acquire the skills abilities and dispositions they need to succeed academically and also post graduation Carolin Kreber is Professor of Teaching and Learning in Higher Education and the Director of the Centre for Teaching Learning and Assessment at the University of Edinburgh Sisters of Prometheus João Paulo André, 2024-07-04 This comprehensive book portrays the long overdue recognition of women s work in chemistry which only materialized with their late access to universities Besides describing their scientific triumphs it unveils the human side of the characters involved providing an intimate perspective often supported by extracts from their correspondence By delving into their personal stories struggles and successes this book brings these women to life Written with simplicity and rigor it aims to inspire and educate readers of all backgrounds about the extraordinary scientific achievements of these trailblazing women **Pure Intelligence** Melvyn C. Usselman, 2015-05-21 William Hyde Wollaston made an astonishing number of discoveries in an astonishingly varied number of fields platinum metallurgy the existence of ultraviolet radiation the chemical elements palladium and rhodium the amino acid cystine and the physiology of binocular vision among others Along with his colleagues Humphry Davy and Thomas Young he was widely recognized during his life as one of Britain s leading scientific practitioners in the first part of the nineteenth century and the deaths of all three within a six month span between 1828 and 1829 were seen by many as the end of a glorious period of British scientific supremacy Unlike Davy and Young however Wollaston was not the subject of a contemporary biography and his many impressive achievements have fallen into obscurity as a result Pure Intelligence is the first book length study of Wollaston his science and the environment in which he thrived Drawing on previously unstudied laboratory records as well as historical reconstructions of chemical experiments and discoveries and written in a highly accessible style Pure Intelligence will help to reinstate Wollaston in the history of science and the pantheon of its great innovators **Sir James Dewar, 1842-1923** J.S. Rowlinson, 2016-03-09 Sir James Dewar was a major figure in British chemistry for around 40 years He held the posts of Jacksonian Professor of Natural Philosophy at Cambridge 1875 1923 and Fullerian Professor of Chemistry at the Royal Institution 1877 1923 and is remembered principally for his efforts to liquefy hydrogen successfully in the field that would come to be known as cryogenics His experiments in this field led him to develop the vacuum flask now more commonly known as the thermos and in 1898 he was the first person to successfully liquefy hydrogen A man of many interests he was also with Frederick Abel the inventor of explosive cordite an achievement that involved him in a major legal battle with Alfred

Nobel Indeed Dewar s career saw him involved in a number of public quarrels with fellow scientists he was a fierce and sometimes unscrupulous defender of his rights and his claims to priority in a way that throws much light on the scientific spirit and practice of his day This the first scholarly biography of Dewar seeks to resurrect and reinterpret a man who was a giant of his time but is now sadly overlooked In so doing the book will shed much new light on the scientific culture of the late nineteenth and early twentieth centuries and the development of the field of chemistry in Britain **Henry Enfield**

Roscoe Peter J. T. Morris, Peter Reed, 2024 Now largely forgotten Henry Enfield Roscoe was one of the most prominent chemists and educational reformers in Victorian Britain His contributions include transforming Owens College into Victoria University now the University of Manchester campaigning for the reform of technical education serving as the Liberal MP for South Manchester and cofounding the Lister Institute of Preventative Medicine In this detailed biography authors Morris and Reed provide a timely and original contribution to the history of nineteenth century British science and its relation to education industry and government policy highlighting Roscoe s significant legacy as one of the leading scientists of his generation **The Making of Modern Science** David Knight, 2009-11-16 This volume brings together the people events and discoveries of 19th century science into a lively narrative It places particular emphasis on the new forms in which scientists communicated with the public in the context of increasing urbanization globalization and industrialization

Arming the Royal Navy, 1793-1815 Gareth Cole, 2015-10-06 The Office of Ordnance has been ill served by previous accounts of its role in arming the Royal Navy during the French Revolution and Napoleonic Wars Cole offers an in depth examination of its organizational structure and demonstrates how the department responded to the pressures of war over an extended period of time Verse and Transmutation Anke Timmermann, 2013-09-25 Verse and Transmutation A Corpus of Middle English Alchemical Poetry identifies and investigates a corpus of twenty one anonymous Middle English recipes for the philosophers stone through critical editions and studies on their histories in early modern manuscripts literature and libraries

Selling Science in the Age of Newton Jeffrey R. Wigelsworth, 2016-04-01 Selling Science in the Age of Newton explores an often ignored avenue in the popularization of science It is an investigation of how advertisements in London newspapers from approximately 1687 to 1727 enticed consumers to purchase products relating to science books lecture series and instruments London s readers were among the first in Europe to be exposed to regular newspapers and the advertisements contained in them This occurred just as science began to captivate the nation s imagination due in part to Isaac Newton s rising popularity following the publication of his Principia 1687 This unique moment allows us to see how advertising helped shape the initial public reception of science This book fills a substantial gap in our understanding of science and the culture in which it developed by examining the medium of advertising and its function in the discourse of both early modern science and commerce It answers questions such as what happens to science once it is a commodity how are consumers tempted to purchase science amidst a sea of other commodities how is the reading public encouraged to give

social acceptance to facts of nature and how did marketing campaigns craft newspapers readers into a source of validation for the items of science advertised In an age where the production of scientific knowledge increasingly relied upon sales to many rather than the endorsement of a single wealthy patron marketing was the key to success
