Information Technologies and Social Orders Carl J. Couch, 2017-07-12 The history of human society as Carl Couch recounts it in his speculative final book is a history of successive sometimes overlapping information technologies used to process the varied symbolic representations that inform particular social contexts Couch departs from earlier media theorists who ignored these contexts in order to concentrate on the technologies themselves Here instead he adopts a consistent theory of interpersonal and intergroup relations to depict the essential interface between the technologies and the social contexts He emphasizes the dynamic and formative capacities of such technologies and places them within the major institutional relations of societies of any size Social orders are viewed in these pages as inherently and reflexively shaped by the information technologies that participants in the institutions use to carry out their work The manuscript was nearly complete in draft at the time of Couch's death He has left a bold synthetic statement reclaiming the common ground of sociology and communication studies and articulating the indispensability of each for the other With admirable scope across historical epochs and cultures he shows in detail the transformative power of information technologies While the author hopes that a humane vision comes with each technological advance he nonetheless describes the numerous instances of mass brutality and oppression that have resulted from the oligarchic control of those technologies Couch's theory and substantive analysis speak directly to the interests of historians sociologists and communication scholars *Review Of Digital*

Texans Who Invented the Personal Computer Revolution Lamont Wood,2013-09-17 Forget Apple and IBM For that matter forget Silicon Valley The first personal computer a self contained unit with its own programmable processor display keyboard internal memory telephone interface and mass storage of data was born in San Antonio TX US Patent number 224 415 was filed November 27 1970 for a machine that is the direct lineal ancestor to the PC as we know it today The story begins in 1968 when two Texans Phil Ray and Gus Roche founded a firm called Computer Terminal Corporation As the name implies their first product was a Datapoint 3300 computer terminal replacement for a mechanical Teletype However they knew all the while that the 3300 was only a way to get started and it was cover for what their real intentions were to create a programmable mass produced desktop computer They brought in Jack Frassanito Vic Poor Jonathan Schmidt Harry Pyle and a team of designers engineers and programmers to create the Datapoint 2200 In an attempt to reduce the size and power requirement of the computer it became apparent that the 2200 processor could be printed on a silicon chip Datapoint approached Intel who rejected the concept as a dumb idea but were willing to try for a development contract Intel belatedly came back with their chip but by then the Datapoint 2200 was already in production Intel added the chip to its catalog designating it the 8008 A later upgrade the 8080 formed the heart of the Altair and IMSI in the mid seventies With further development it was used in the first IBM PC the PC revolution s chip dynasty If you re using a PC you re using a modernized Datapoint 2000 *The Horn Book Guide to Children's and Young Adult Books* ,2002 *The East Asian Computer Chip War*
