

Transfrontier Pollution

- **Transfrontier pollution is pollution generated in one political jurisdiction that creates damages in another political jurisdiction.**
- **The country that generates the pollution does not consider all the social costs when devising environmental policy, because some of the social costs are borne by other countries.**
- **International negotiations must be conducted in order to generate the appropriate level of emissions.**

cleanup and compensation efforts For example pollution from nuclear accidents results from a single event whereas acid rain is a product of chronic emissions the legal and policy concerns differ accordingly In the overview Daniel Barstow Magraw discusses fundamental concepts of international pollution analytic distinctions among types of pollution paradigmatic responses to pollution and the relationship among environmental protection economic development and human rights Other authors examine the existing and evolving principles of customary international law relevant to pollution the U N International Law Commission s work on international liability and international watercourses and a practitioner s perspective The chapters on nuclear pollution analyze the conventional regimes and customary principles applicable to this field including the Chernobyl disaster and the determination and measurement of damages Finally the chapters on acid precipitation summarize the scientific background of the problem and present the multilayered European efforts to control acid rain as well as the Canada United States acid rain controversy International Law and Pollution will be of interest to scholars and students of environmental law and international law

Liability for Transboundary Pollution at the Intersection of Public and Private International Law Guillaume Laganière, 2022-02-24 This book focuses on how public and private international law address civil liability for transboundary pollution In public international law civil liability treaties promote the implementation of minimum procedural standards in domestic tort law This approach implicitly relies on private international law to facilitate civil litigation against transboundary polluters Yet this connection remains poorly understood Filling the gap this book engages in a meaningful dialogue between the two areas and explores how domestic private international law can reflect the policies developed in international environmental law It begins with an investigation of civil liability in international environmental law It then identifies preferable rules of civil jurisdiction foreign judgments and choice of law for environmental damage using Canadian private international law as a case study and making extensive references to European law Liability for transboundary pollution is a contentious issue of the law both in scholarship and practice international lawyers both private and public as well as environmental lawyers will welcome this important work

The Legal Regime for Transboundary Water Pollution: Between Discretion and Constraint Andre Nollkaemper, 1993-07-28 The main challenge to international environmental law is to strike an adequate balance between the discretion of states to undertake economically attractive activities and the need for constraint in order to protect the environment Based on one particularly elaborate environmental regime the regime for transboundary water pollution as it applies to the Netherlands this book examines how international law has sought to replace discretion by constraint and what limitations have been encountered with that endeavour The study provides a comprehensive assessment of the main assets and lacunae of the regime for transboundary water pollution It discusses the applicable substantive and procedural rules including new developments such as the precautionary principle the obligation to conduct environmental impact assessments the combined use of legal rules such as the 1992 Convention on the Protection of Transboundary Watercourses and the 1992 Paris Convention on the Protection of the Marine Environment of the North East Atlantic and non legal rules such as the Rhine Act Programme and the application of procedures to control

the implementation of states obligations Since many of the issues are not exclusively relevant to transboundary water pollution the main conclusions of this study may prove directly applicable to other international environmental regimes
