1990 Focus on Pulmonary Pharmacology and Toxicology Mannfred A.. Hollinger,1991 *1990 Focus on Pulmonary Pharmacology and Toxicology* Mannfred A Hollinger,2022-01-06 Published in 1991 Focus on Pulmonary Pharmacology and Toxicology is intended to cover a wide range of topics For example Volume 2 contains chapters dealing with Respiratory Tract Lining fluids Pulmonary Fibrosis Ephysema and Adrenoceptors in airways **Metabolic Activation and Toxicity of Chemical Agents to Lung Tissue and Cells** T.E. Gram,2013-10-22 Research has shown that the lung is capable of metabolically activating xenobiotics into intermediates that can covalently bind to pulmonary tissue Further it has been shown that the lung consists of many distinct cell types with the ability to take up and sequester metabolically unchanged drugs and chemicals that are ultimately toxic in effect This volume reflects the extent of these developments and provides a state of the art reference in a rapidly evolving field incorporating both drug metabolism and pulmonary toxicology research *Oxygen Radicals and Lung Injury* ,1994 *Environmental Health Perspectives* ,1993 *Toxicological Evaluation of Chemical Interactions* ,1994 **Airways Smooth Muscle: Development, and Regulation of Contractility** David Raeburn,Mark A. Giembycz,2013-03-08 Most studies on autonomic innervation of smooth muscle have focused on the short term mechanisms involved in neurotransmission in physiological and pathophysiological conditions However recent observations of the long term plasticity of this system i e its capacity for regeneration and for compensatory change in pattern of innervation and expression of cotransmitters and receptors in ageing following surgery trauma or in disease have indicated that an understanding of the mechanisms involved could influence the design of therapeutic regimes There is increasing evidence for long term communication between nerves and smooth muscle cells during development and throughout adult life To date the trophic interactions between nerves and airway musculature have attracted little interest consequently much of the information presented here is drawn from studies using other smooth muscles However the questions posed about trophic interactions during development apply as much to airways smooth muscle neuroeffector systems as to other autonomic neuroeffector systems These are i How do developing nerve fibres know where to go and how do they reach their target sites ii What determines the density and pattern of innervation at reaching the effector iii How do the nerves survive and maintain their position once established iv What factors influence neurochemical differentiation such that genetically multipotential neurones are triggered to synthesize one or combinations of neurotransmitters v What influence do nerves have on the structure function and receptor expression of their effector cells vi How do diseases interrupt these processes see 1 **Development of a Bleomycin Hamster Model of Subchronic Lung Fibrosis, and Evaluation of the Antifibrotic Effects of Interferon-inducer Bropiramine and Calcium Channel Blockers Diltiazem and Verapamil** Shaheen Zia,1993 *American Journal of Respiratory Cell and Molecular Biology* ,1992 *Septic Shock* Jean-François Dhainaut,Lambertus G. Thijs,Gilbert R. Park,2000 A current authoritative guide to the clinical management of the critically ill

septic shock patient Discusses the benefits and limitations of alternative management strategies Identifies key clinical problems to be addressed and assigns the correct priority to each problem in a step by step manner Checklists and algorithms are provided as appropriate Toxicology of Chemical Respiratory Hypersensitivity Rebecca J. Dearman,Ian Kimber,1997-01-25 An overview of respiratory asthma is included in this text which examines aspects of chemical respiratory allergy and occupational asthma caused by exposure to chemicals It covers occupational safety measures and methods for identifying and characterizing chemical allergens Effects of Taurine and Niacin Treatment Upon Pulmonary Lysyl Oxidase, Collagenase, and Collagen Crosslinks in Bleomycin-induced Pulmonary Fibrosis Robert Jay Blaisdell,1992

Toxicologic Pathology Page R. Bouchard,Pritam S. Sahota,Shannon Wallace,Zbigniew W. Wojcinski,Vanessa L. Schumacher,2025-06-23 The new edition provides practical and timely information for toxicologic pathologists working in drug discovery and development The introductory concept chapters are consolidated into two more concise and better organized introductory chapters The two concept chapters introduce the reader to pharmaceutical R D the role of the pathologist in the process and critical partner scientific disciplines with whom the pathologist will collaborate In this revision the organ system chapters incorporate more consistent commentary and guidance on the molecular mechanism of action human translational relevance and regulatory impact of pathological findings as they are described in these chapters Key Features Aids scientists in understanding spontaneously occurring and compound related pathological findings Features three new well respected scientists on the editorial team Includes more consistent commentary and guidance in the organ system chapters *Postdoctoral Research Fellowship Opportunities* National Institutes of Health (U.S.),1995 **ACE Inhibitors** Pedro D'Orléans-Juste,G.E. Plante,2012-12-06 Angiotensin converting enzyme inhibitors ACEI represent the first class of antihypertensive agents that was designed and developed on the basis of a well defined physiopathological axis of arterial hypertension a vascular disorder that is now becoming one of the major causes of morbidity mortality not only in developed societies but also in the highly populated developing countries 1 CAPTOPRIL the prototype of the PRIL family which now comprises more than 40 molecule species was quite hazardous and the clinical development almost failed when serious side effects were reported in an alarmist fashion in reputable scientific journals such as the New England Journal of Medicine and Lancet Squibb Sons came very close to withdrawing CAPTOPRIL from clinical investigation 2 However after re examination of the data obtained from different categories of patients and appropriate dose adjustments the clinical use of CAPTOPRIL turned out to be revolutionary The prototype as well as other members of the PRIL family became the starting point for numerous basic and clinical research programs focusing on the interactions of ACEI with the kinin endothelin and

nitric oxide systems and the contribution of the receptors for AT I AT 2 bradykinin Bland B ETA and ET B to the pharmacological actions 2 of the respective peptides This research activity led to the development of new pharmacological agents such as the angiotensin receptor antagonists and more recently the neutral endopeptidase inhibitors In the near future bradykinin receptor antagonists also will be available to modulate ACEI pharmacological actions Principles of Safety Pharmacology Michael K. Pugsley, Michael J Curtis, 2015-06-19 This book illustrates in a comprehensive manner the most current areas of importance to Safety Pharmacology a burgeoning unique pharmacological discipline with important ties to academia industry and regulatory authorities It provides readers with a definitive collection of topics containing essential information on the latest industry guidelines and overviews current and breakthrough topics in both functional and molecular pharmacology An additional novelty of the book is that it constitutes academic pharmaceutical and biotechnology perspectives for Safety Pharmacology issues Each chapter is written by an expert in the area and includes not only a fundamental background regarding the topic but also detailed descriptions of currently accepted validated models and methods as well as innovative methodologies used in drug discovery
