Review of Radio Science W. Ross Stone, 2002-08-12 A triennial summation of the state of the art in radio science This book is the fourth in the modern series of triennial reviews prepared by the International Union of Radio Science to further communication and understanding of the status and future of radio science both for those working in the field and for those who want to know what is of current importance in this area The International Union of Radio Science URSI Union Radio Scientifique Internationale has divided the subject of Radio Science according to the ten topics of the Scientific Commissions that make up URSI This volume consists of thirty eight original peer reviewed papers Each paper provides a critical in depth review of and in many cases tutorial on advances and research that

have been of significant importance within the area of interest of the Commissions during the past three to four years Among the topics covered are Electromagnetic metrology Fields and waves Signals and systems Electronics and photonics Electromagnetic noise and interference Wave propagation and remote sensing Ionospheric radio and propagation Waves in plasmas Radio astronomy Electromagnetics in biology and medicine With an included CD ROM of the full book text allowing the user to do full text searching of all the papers the Review of Radio Science 1999 2002 is a resource of vital importance to anyone working in or with an interest in radio science *Cable Shielding for Electromagnetic Compatibility* Anatoly

Tsaliovich, 2012-12-06 The mathematical theory of wave propagation along a conductor with an external coaxial return is very old going back to the work of Rayleigh Heaviside and J J Thomson These words were written by S A Schelkunoff back in 1934 Indeed those early works dealt with signal propagation along the line as well as electromagnetic shielding of the environment inside and or outside the metallic enclosures Max well himself developed pioneering studies of single layer shielding shells while a paper with such a modern title as On the Magnetic Shielding of Concentric Spherical Shells was presented by A W Rucker as early as 1893 Such state of the art shielding theory created in the last century is even more amazing if you think that at almost the same time namely in 1860s a manuscript of Jules Verne s book Paris in the xx Century was rejected by a publisher because it pre dicted such outrageously incredible electrotechnology as for example FAX service by wires and the electrocutioner s chair With regard to the last invention I suspect many readers would rather Jules Verne has been wrong However although the beginning of electromagnetic shielding theory and its implementation to electronic cables date back more than a century this dynamic field keeps constantly growing driven by practical applications Electromagnetic Fields
