Multimedia Data Hiding Min Wu,Bede Liu,2013-03-19 The digital information revolution has brought about profound changes in our society and our life New devices and powerful software have made it possible for consumers worldwide to create manipulate share and enjoy the multimedia information Internet and wireless networks offer ubiquitous channels to deliver and to exchange multimedia information for such purposes as remote collaboration distant learning and entertainment With all these advances in multimedia coding and communication technologies over the past decade the major hurdle for allowing much broader access of multimedia assets and deployment of multimedia services no longer lies with bandwidth related issues but with how to make sure that content is used for its intended purpose by its intended recipients The core issue then becomes the development of secure management of content usage and delivery across communication networks Data hiding and digital watermarking are promising new technologies for multimedia information protection and rights management Secondary data can be embedded imperceptibly in digital multimedia signals for a variety of applications including ownership protection authentication access control and annotation Data hiding can also be used to send side information in multimedia communication for providing additional functionalities or for enhancing performance The extraction of the embedded data may or may not need knowledge of the original host media data In addition to imperceptibility robustness against moderate processing such as compression is also an important consideration
