

The Principles of Surgical Oncology

ABSTRACT

Oncology is a field in veterinary medicine which is demanding more attention from both veterinarians and their clients. An understanding of the principles of oncology and its treatment is essential for a successful outcome. The role of the veterinary surgeon in treating cancers in companion animals is reviewed. (Liptak, J.M. (1997). *Aust. Vet. Practit.* 27:114)

INTRODUCTION

Cancer is one of the major causes of death in cats and dogs (Ogilvie, 1995; Withrow, 1996a). Successful cancer treatment requires a positive and dedicated attitude by both the owner and veterinarian but this approach should also be realistic. The treatment of cancer requires knowledge of tumour behaviour, surgical techniques, and adjunctive therapies such as chemotherapy and radiotherapy.

The role of surgery in oncology is multifactorial and includes diagnosis with various biopsy techniques, curative with complete excision of the tumour, palliative when the type or severity of tumour prevents curative surgery, adjunctive or cytoreductive surgery to facilitate the effectiveness of other therapies such as cryosurgery, chemotherapy and radiotherapy, and the resection of metastatic disease.

DIAGNOSIS

Many cancer patients are old and hence it is important to assess their health (Soderstrom & Gilson, 1995). The following tests should be considered on an individual basis: haematology, biochemistry, electrocardiogram, radiography, computed tomography scans, nuclear medicine, and magnetic resonance imaging (Straw, 1995).

Radiography always requires a minimum of two views for proper assessment of the size and extent of the tumour. Thoracic radiographs require four views to ensure the best opportunity of detecting metastatic disease. These projections are right and left laterals, dorsoventral and ventrodorsal (Straw, 1995). Secondary nodules are usually identifiable if their diameter is greater than 10mm or if their cross-sectional diameter is less than that of a major pulmonary vessel (Straw, 1995).

The two lateral views are required as atelectasis and increased perfusion occurs in the dependant lung fields which results in poorer definition of metastatic nodules (Straw, 1995). The non-dependant lung fields have increased ventilation and, combined with the greater lesion-to-film magnification, make diagnosis of metastatic pulmonary nodules easier (Straw, 1995). Metastasis may still exist despite the failure to detect pulmonary nodules.

Paraneoplastic Syndromes

Cancer can alter the metabolism and function of all body parts at the primary tumour site, metastatic disease site or distant to the actual tumour (Ruslander & Page, 1995). These are called paraneoplastic syndromes. They are not related to tumour size, metastasis or tissue of origin (Ruslander & Page, 1995). The cause of paraneoplastic syndromes is unknown but hypothesised to result from tumour cell production of biochemicals including polypeptides, hormones, hormone-like substances and toxins (Gilson & Stone, 1990b; Gorman, 1990; Ruslander & Page, 1995). The incidence of paraneoplastic syndromes is unknown but affects 15% to 20% of human patients, not including cachexia, and up to 75% of patients with untreatable cancers (Gilson & Stone, 1990b). Paraneoplastic syndromes occur most frequently with endocrine and haematological tumours (Gorman, 1990). Paraneoplastic syndromes have been reviewed in the veterinary literature (Dyer, 1992; Forrester & Fallin, 1992; Forrester & Relford, 1992; Rogers, 1992; Ruslander & Page, 1995; Ogilvie, 1996).

INTRODUCTION TO SURGERY

The surgical removal of localised tumours cures more human and animal cancers than any other mode of therapy but it is only part of a multidisciplinary approach involving tumour biology, chemotherapy, radiotherapy

1997 Year Of Oncology:

Evidence-Based Oncology Christopher B. Williams, 2008-04-15 This is a book about using the best evidence to inform treatment decisions for people with cancer. It is written by oncologists for oncologists using examples throughout to illustrate key points. The book starts off with a toolbox section written in a way which will help those relatively new to the principles of evidence based oncology to understand the key issues and equip them with the basics of how to tell a good study from a bad one. The majority of the book then deals with an evidence based summary of the common and important cancers in a structured and easy to read format around common patient scenarios and frequently asked questions. Whilst most of the evidence is based on randomised controlled trials other studies are cited where appropriate eg when discussing adverse events. The unique accompanying book website will contain updates of new chapters and studies as they become available. Written by leading world figures in the evidence based movement. Includes free CD ROM with PC eBook and sample PDA chapter. Methodology of reviewing and appraising evidence discussed in the context of cancer management. Clinical sections covering prevention and screening. Chapters on treatment of the individual major cancers review the current best available evidence to most frequently asked questions. Rigorously structured explicit searches evidence of efficacy and harms plus comment around clinical scenarios. Free access update website keeping the text current and live www.evidbasedoncology.com

Progress in Oncology 2003 Vincent T. DeVita, 2003-04 The third volume in this outstanding series of annual updates in oncology. *Progress in Oncology 2003* addresses nineteen of the most important hot topics in the field. Under the careful direction of Drs DeVita, Hellman and Rosenberg each annual volume in this exciting series presents concise summaries of the state of the art in cancer basic science and clinical application written by 34 of the top researchers and clinicians in the world. As with all the volumes in the series *PIO 2003* covers critical issues in clinical cancer care and research in a scholarly though readable style. Chapters on advances in treatment and diagnosis including radioimmunotherapy, molecular markers, radiolabeled octreotide and microarray analysis review the state of the art in these emerging fields. Top experts provide timely overviews of mammographic screening recommendations and current therapy for pancreatic tumors. In special section world class authorities debate the use of Alpha Interferon in melanoma treatment. These and other rigorously referenced chapters make *PIO 2003* an indispensable new oncology resource.

Synopsis of Clinical Oncology Michael D. Stubblefield, MD, Michael W. O'Dell, MD, 2010-04-09 Authored by some of the world's leading cancer experts from wide ranging disciplines including oncology, radiation oncology, neurosurgery, orthopedic surgery and radiology, this compact volume provides authoritative state of the art primer level overviews of the various cancer types, their evaluation and treatment. Every aspect of oncology is covered with clear up to date descriptions of the general principles and concepts fundamental to attaining a clinical appreciation of the foundations of cancer care. Each chapter is concise but highlights the basic tenets health care professionals working with cancer patients need to know to understand the diseases.

and current treatment options To facilitate review Key Points are boxed in each chapter to summarize important clinical information and concepts at a glance This book represents a synthesis of information from some of the top physicians in oncology that is not as easily accessed anywhere else Features of Synopsis of Clinical Oncology include Multi specialty expert authorship Focus on therapeutics management of cancer Key Points boxed in each chapter for quick review

Morbidity and Mortality Weekly Report ,2000-10 **The M.D. Anderson Surgical Oncology Handbook** Barry W. Feig,David H. Berger,George M. Fuhrman,University of Texas M.D. Anderson Cancer Center. Dept. of Surgical Oncology,2006 Written by current and former surgical oncology fellows of the world renowned M D Anderson Cancer Center this portable handbook is a practical guide to established surgical oncology principles for each organ system This new Fourth Edition features extensive updates including new chapters on reconstructive surgery in the cancer patient Concise chapters illustrated with algorithms and line drawings outline the essential elements of diagnosis staging and clinical management of solid tumors treated in surgical practice The authors emphasize multidisciplinary treatment planning including therapy sequencing and biologic therapies

Selected Topics in Clinical Oncology J.M. Debois,2012-12-06 By Prof Dr A T Van Oosterom Head of the Department of Oncology at the Catholic University of Leuven Belgium The word cancer defines over 180 different diseases Some occurring quite often and are well known others are very rare and sometimes so unknown that the diagnosis is not even suspected at operation In this book Dr Debois a retired radiation oncologist describes a selected group of cancer types some of which are difficult to find in the standard textbooks in a logical format starting with their bibliography history incidence anatomy clinical presentation diagnosis and staging treatment and follow up For the general oncologist in the community it gives the appropriate data to understand the described diseases and to familiarize him with the peculiar patient he has identified The many tables and figures in every chapter contain an enormous amount of data difficult to collect without extensive searches The mix of historical and new genetic data makes reading attractive In my opinion this book will find his place in the library of every oncologist who wants to know more about the rarer tumors he or she encounters We know a lot about the common tumors but too little about the diseases described here

Journal of the National Cancer Institute ,2005 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics

Minimally Invasive Uro-Oncologic Surgery Robert G. Moore,Jay T. Bishoff,2024-11-01 The invention of laparoscopic urological techniques in the early 1990s was met with scepticism by urologists who demanded that the methods prove themselves when compared to established open surgical procedures However the techniques were quickly shown as successful and over time have gained acceptance through reproducible and durable outcomes In this well illustrated surgical text an international team of urologic surgeons specializing in uro oncology share the experience gained in effective and reproducible teaching techniques in the field and present the pioneering knowledge that will enable others to learn more about this important

ground breaking procedure *Cumulative Book Index* ,1998 A world list of books in the English language Cumulated Index Medicus ,1998 **Management of Breast Diseases** Ismail Jatoi,Achim Rody,2016-11-16 This text is intended as a practical guide for physicians and surgeons who treat diseases of the breast both benign and malignant Thus general surgeons internists family practitioners gynecologists surgical oncologists radiation oncologists and medical oncologists will find this book useful The management of breast diseases requires a multidisciplinary approach and this textbook therefore includes the views of a wide range of specialists from throughout the world Today the treatment of breast diseases is largely predicated on the results of randomized prospective trials The results of many clinical trials are discussed in detail and readers will find this book to be a useful guide to the evidence based treatment of breast diseases The revised edition provides a comprehensive update of the previous version of the book Specifically it contains 2 new chapters Molecular Classification of Breast Cancer and Breast Cancer Molecular Testing for Prognosis and Prediction In addition since publication of the previous edition the results of numerous adjuvant systemic therapy and neo adjuvant systemic therapy trials have been published and this edition provides a comprehensive overview of these trials and discusses how they have changed the management of breast cancer Similarly there have been in the last few years important new developments in the local therapy of breast cancer This edition discusses these new developments and particularly recent developments and controversies concerning the management of the axilla in patients with primary breast cancer New guidelines with respect to radiotherapy are also reviewed and discussed Finally all chapters in the book are thoroughly revised and updated to provide readers with current understanding of the biology and treatment of breast cancer **Renal Cell Cancer** Jean J. M. C. H. Rosette,Cora N. Sternberg,Hein P. van Poppel,2008-07-10 This book is a state of the art reference work covering every aspect of the field of renal cell cancer from diagnostics to clinical management It provides an overview of new information concerning epidemiology molecular and immunologic characteristics as well as surgical therapy Particular focus is given to the latest diagnostic tests and genetic counseling Associated topics such as pain management and palliative care are also covered It is a vital reference tool for urologists oncologists and radiologists alike being the most comprehensive volume available on the subject *Berek and Hacker's Gynecologic Oncology* Jonathan S. Berek,Neville F. Hacker,2010 The focus of Berek and Hacker s for four editions has been on the application of basic and clinical science to the clinical practice of gynecologic oncology That approach has been successful and the book has been well received The Fifth Edition follows the format of the previous editions with the addition of color We will also include a fully searchable companion Website that includes an image bank *Nutritional Oncology* George L. Blackburn,Vay Liang W. Go,John Milner,2011-05-02 Nutritional oncology is an increasingly active interdisciplinary field where cancer is investigated as both a systemic and local disease originating with the changes in the genome and progressing through a multi step process which may be influenced at many points in its natural history by nutritional factors that could impact the prevention of cancer the quality of life of cancer

patients and the risk of cancer recurrence in the rapidly increasing population of cancer survivors Since the first edition of this book was published in 1999 the idea that there is a single gene pathway or single drug will provide a cure for cancer has given way to the general view that dietary environmental factors impact the progression of genetic and cellular changes in common forms of cancer This broad concept can now be investigated within a basic and clinical research context for specific types of cancer This book attempts to cover the current available knowledge in this new field of nutritional oncology written by invited experts This book attempts to provide not only the theoretical and research basis for nutritional oncology but will offer the medical oncologist and other members of multidisciplinary groups treating cancer patients practical information on nutrition assessment and nutritional regimens including micronutrient and phytochemical supplementation The editors hope that this volume will stimulate increased research education and patient application of the principles of nutritional oncology

NEW TO THIS EDITION Covers hot new topics of nutrigenomics and nutrigenetics in cancer cell growth Includes new chapters on metabolic networks in cancer cell growth nutrigenetics and nutrigenomics Presents substantially revised chapters on breast cancer and nutrition prostate cancer and nutrition and colon cancer and nutrition Includes new illustrations throughout the text especially in the breast cancer chapter Includes integrated insights into the unanswered questions and clearly defined objectives of research in nutritional oncology Offers practical guidelines for clinicians advising malnourished cancer patients and cancer survivors on diet nutrition and lifestyle Provides information on the role of bioactive substances dietary supplements phytochemicals and botanicals in cancer prevention and treatment

Breast Cancer in Young Women Matteo Lambertini, Philip Poorvu, Hee Jeong Kim, 2022-05-23

Cancer Genetics for the Clinician Gail L. Shaw, 2012-12-06 Cancer genetics is a quickly growing field within oncology The ability to identify individuals at high risk for cancer improves the chance of early prevention and detection of cancer The results of genetic testing affect quality of life employment and ability to be insured This volume will provide an overview of cancer genetics inherited cancer susceptibility and available services and testing including both the risks and benefits of testing Some of the topics covered include genetics of breast and ovarian cancer testing minors for inherited cancer risk chemoprevention of heritable cancer risk genetics of colorectal cancer insurance issues in genetic testing for cancer ethical and legal issues in genetic testing for cancer susceptibility testing for breast cancer risk in the Ashkenazim estimating individualized risk of breast cancer genetic counseling for the individual with inherited cancer susceptibility and components of a genetic cancer risk clinic While heritable cancers account for between five and ten percent of all cancer cases molecular alterations attributable to specific inherited cancer susceptibility may give us important clues into the mechanism by which cancer occurs not only in predisposed individuals but also for sporadic cases

Comprehensive Textbook of Genitourinary Oncology Nicholas Vogelzang, 2006 Thoroughly revised for its Third Edition this volume is the most comprehensive multidisciplinary text on genitourinary cancers This edition has two new editors Frans M J Debruyne and W Marston Linehan and more than 50% new

contributors Seventeen new chapters cover familial prostate cancer biology of bone metastases molecular pathology and biologic determinants PSA and related kallikreins needle biopsy laparoscopic surgical procedures 3D conformal radiotherapy hormones and radiotherapy integration of chemotherapy and other modalities quality of life after treatment of localized prostate cancer management of rising PSA after local therapy the role of surgery in advanced bladder cancer post chemotherapy node dissections and resection of metastatic disease and stem cell transplantation

Gastrointestinal Oncology James L. Abbruzzese, 2004 In 74 chapters Gastrointestinal Oncology brings together a diverse group of specialists to provide the most authoritative up to date and encyclopedic volume currently available on the subject The first part of this text introduces a series of concepts and topics that are important to gastrointestinal malignancies in general These topics include epidemiologic principles prevention screening familial GI cancers developmental and molecular biology pathobiology general therapeutic principles emerging therapies and palliative care The second part of the book covers each of the specific cancers affecting the human gastrointestinal tract These chapters are introduced by state of the art discussions outlining our current understanding of the pathobiology and molecular biology relevant to each cancer Subsequent sections describe the multidisciplinary management of specific clinical situations By organizing the treatment related chapters around clinical scenarios the reader will readily find the information necessary to effectively manage the complex clinical situations encountered by patients with gastrointestinal malignancies

Cancer Nursing Connie Henke Yarbro, Michelle Goodman, Margaret Hansen Frogge, 2005 Rapid changes in oncology necessitate a comprehensive up to date reference for oncology nurses For seventeen years best selling Cancer Nursing Principles and Practice has filled this need supplying oncology nurses with cutting edge current information Now in its Sixth Edition Cancer Nursing reflects the constantly shifting progress in the science of oncology as well as emerging new therapies new treatment modalities the latest results from clinical trials updates on new chemotherapeutic agents and targeted therapies and new perspectives on supportive care The updated and revised Sixth Edition includes new chapters on the following topics Screening and Detection for asymptomatic individuals Hematopoietic growth factors Complementary and alternative therapies Distress Symptoms Cancer Survivorship Principles models history and issues of end of life and palliative care Delivery of comfort care Legal issues in cancer nursing Publisher
