Remote Sensing of Aquatic Coastal Ecosystem Processes Laurie L. Richardson, Ellsworth F. LeDrew, 2006-02-02 The aquatic coastal zone is one of the most challenging targets for environmental remote sensing. Properties such as bottom reflectance, spectrally diverse suspended sediments and phytoplankton communities, diverse benthic communities and transient events that affect surface reflectance, coastal blooms, runoff etc. all combine to produce an optical complexity not seen in terrestrial or open ocean systems. Despite this complexity, remote sensing is proving to be an invaluable tool for Case 2 waters. This book presents recent advances in coastal remote sensing with an emphasis on applied science and management. Case studies of the operational use of remote sensing in ecosystem studies, monitoring and interfacing remote sensing science management are presented. Spectral signatures of phytoplankton and suspended sediments are discussed in detail with accompanying discussion of why blue water Case 1 algorithms cannot be applied to Case 2 waters. Audience: This book is targeted for scientists and managers interested in using remote sensing in the study or management of aquatic coastal environments. With only limited discussion of optics and theory presented in the book, such researchers might benefit from the detailed presentations of aquatic spectral signatures and to operational management issues. While not specifically written for remote sensing scientists, it will prove to be a useful reference for this community for the current status of aquatic coastal remote sensing.

Real-Time Recursive Hyperspectral Sample and Band Processing Chein-I Chang, 2017-04-23 This book explores recursive architectures in designing progressive hyperspectral imaging algorithms. In particular, it makes progressive imaging algorithms recursive by introducing the concept of Kalman filtering in algorithm design so that hyperspectral imagery can be processed not only progressively sample by sample or band by band but also recursively via recursive equations. This book can be considered a companion book of author's books *Real Time Progressive Hyperspectral Image Processing* published by Springer in 2016.

Real-Time Progressive Hyperspectral Image Processing Chein-I Chang, 2016-03-22 The book covers the most crucial parts of real time hyperspectral image processing: causality and real time capability. Recently, two new concepts of real time hyperspectral image processing: *Progressive HyperSpectral Imaging (PHSI)* and *Recursive HyperSpectral Imaging (RHSI)*. Both of these can be used to design algorithms and also form an integral part of real time hyperspectral image processing. This book focuses on the progressive nature in algorithms on their real time and causal processing implementation in two major applications: endmember finding and anomaly detection, both of which are fundamental tasks in hyperspectral imaging but generally not encountered in multispectral imaging. This book is written to particularly address PHSI in real time processing while a book *Recursive Hyperspectral Sample and Band Processing: Algorithm Architecture and Implementation* Springer 2016 can be considered as its companion book.
