

# News From International Carnahan Conference on Security Technology

Henry Oman  
*Editor-In-Chief*

The late Professor John S. Jackson started the "Carnahan Crime Conference" at the University of Kentucky with IEEE-AESS sponsorship. International interest grew, and the name changed to International Carnahan Conference on Security Technology (ICST). The conference location alternates between the United States and other world cities. In 1996, the 30th ICST returned to its first home in Lexington, KY, where an important speaker from Britain was commissioned a colonel in the Kentucky army by the state's governor! Tom Andrews was Chairman of the 1997 conference which was held in Canberra, Australia. The 1998 site will be Alexandria, Virginia.

The outstanding characteristic of this conference is the introduction of new ideas from its international participants. For example, there would have been no practical way for us to bring the following participants to the United States:

- **Jason Brown, Australian Security Intelligence Organization**, has 20 years of experience as a counter-intelligence officer, described the security threats he expects to see in the 21st century, and the security technology and equipment needed to combat them. He described the five participants needed for countering a security threat.
- **Max Robinson, Nottingham Trent University, UK**, described a new PC-based technique that, in real time, converts X-ray line images of baggage passing through an airport scanner into sharp three-dimension views for the operator. Scanned objects, which can be made to rotate on the screen, even have different colors, depending on their density.
- **So-Lin Yen, Ministry of Justice, Taiwan, ROC**, described progress in applying artificial intelligence to identifying people by their voices.
- **John Rogers, Defense Signals Directorate, Canberra, Australia**, described the communication security that could be obtained with the public key, plus

private key, enriched by "Hash" (a huge random number). It would take a year to surreptitiously decrypt such a message with a supercomputer; an ordinary encrypted message can be decrypted within a few hours by a Pentium-based PC.

- A paper from *Barringer Research, Mississauga, Canada*, described an ion mobility spectrometer that can detect nanogram quantities of explosive compounds in dust obtained by vacuuming or wiping the surface of a suitcase.

The hospitality was outstanding. I arrived in the hotel lobby an hour before the conference started — the General Chairman was there to greet me! The final "field trip" was to Australia's Barlong sheep "station." There the farmer demonstrated his sheep-shearing capability after which we were allowed to feed bread to the kangaroos and were treated to a generous lunch.

## SECURITY CHALLENGES OF THE 21ST CENTURY

The cold war between two world powers dominated security technology for the last 50 years. New and challenging threats of the 21st century were outlined by Jason Brown, an executive in the Australian Security Office, whose qualifications include 20 years of service as a spy. He described the sources of security threats, their operating plans, and new technology for dealing with them. The threats will be created by these agents:

- A seeker of political power.
- A terrorist who seeks satisfaction and attention by generating costly damage or loss of lives by car-bombing buildings, demolishing airplanes, and attacking crowds.
- A robber who seeks wealth by stealing money or property by means that produce the greatest value with the least risk.
- An agent who is paid for acquiring secret data.
