Multimedia services have gained momentum in the past few years due to the easy availability of computing power and storage media. Society is demanding human like intelligent behaviour such as adaptation and generalization from machines every day. With this view in mind researchers are working on fusing intelligent paradigms such as artificial neural networks, swarm intelligence, artificial immune systems, evolutionary computing and multiagents with multimedia services. Artificial neural networks use neurons interconnected using various schemes for fusing learning in multimedia based systems. Evolutionary computing techniques are used in tasks such as optimization. Typical multiagent systems are based on Belief Desire Intention model and act on behalf of the users. Typical examples of intelligent multimedia services include digital libraries, e learning and teaching, e government, e commerce, e entertainment, e health and e legal services. This book includes 15 chapters on advanced tools and methodologies pertaining to the multimedia services. The authors and reviewers have contributed immensely to this research oriented book. We believe that this search volume will be valuable to professors, researchers and students of all disciplines such as computer science, engineering and management. We express our sincere thanks to Springer Verlag for their wonderful editorial support.

**Intelligent Multimedia Processing with Soft Computing** Yap Peng Tan, Kim-Hui Yap, Lipo Wang, 2006-09-15. Soft computing represents a collection of techniques such as neural networks, evolutionary computation, fuzzy logic and probabilistic reasoning. As posed to conventional hard computing, these techniques tolerate imprecision and uncertainty similar to human beings. In the recent years, successful applications of these powerful

methods have been published in many disciplines in numerous journals conferences as well as the excellent books in this book series on Studies in Fuzziness and Soft Computing This volume is dedicated to recent novel applications of soft computing in multimedia processing The book is composed of 21 chapters written by experts in their respective fields addressing various important and timely problems in multimedia computing such as content analysis indexing and retrieval recognition and compression processing and filtering etc In the chapter authored by Guan Muneesawang Lay Amin and Lee a radial basis function network with Laplacian mixture model is employed to perform image and video retrieval D Androutsos P Androutsos Plataniotis and Venetsanopoulos investigate color image indexing and retrieval within a small world framework Wu and Yap develop a framework of fuzzy relevance feedback to model the uncertainty of users subjective perception in image retrieval
