1998 Year Of Endocrinology:

50 Studies Every Endocrinologist Should Know John Interlandi, 2025-10-31 This book consists of fifty chapters each summarizing a single valuable research study that has had significant impact on advancing the science of Endocrinology. It is constructed specifically to assist Endocrine Practitioners in making the more difficult decisions they encounter in practice. We see patients who fail the easy treatments or those who have contraindications to or side effects from standard treatments. Examples of such challenges would be: When is the optimal time to refer to surgery for a parathyroid, pituitary or thyroid tumor? Or when should I change osteoporosis medications? Or is there some way to mitigate drug side effects so I can prescribe a certain treatment? This book unearths nitty gritty scientific facts hidden in the world literature that underlie good decision making for the tough cases. Many of these studies are from other countries since for various reasons they could not be performed in the USA. Each Chapter starts with a difficult case, has a concise summary of the relevant research report and concludes with key take home messages and major practice points. Ten Basic Endocrinology Care Principles are mentioned throughout the books which conceptually link all the Chapters together. This is an essential resource for Endocrine professionals who prefer to bypass algorithms, dig deep into the science to understand it and to explain the details to their patients.
