**Computer, Network, Software, and Hardware Engineering with Applications** Norman F. Schneidewind,2012-03-27  
There are many books on computers networks and software engineering but none that integrate the three with applications Integration is important because increasingly software dominates the performance reliability maintainability and availability of complex computer and systems Books on software engineering typically portray software as if it exists in a vacuum with no relationship to the wider system This is wrong because a system is more than software It is comprised of people organizations processes hardware and software All of these components must be considered in an integrative fashion when designing systems On the other hand books on computers and networks do not demonstrate a deep understanding of the intricacies of developing software In this book you will learn for example how to quantitatively analyze the performance reliability maintainability and availability of computers networks and software in relation to the total system Furthermore you will learn how to evaluate and mitigate the risk of deploying integrated systems You will learn how to apply many models dealing with the optimization of systems Numerous quantitative examples are provided to help you understand and interpret model results This book can be used as a first year graduate course in computer network and software engineering as an on the job reference for computer network and software engineers and as a reference for these disciplines **Secure**

**Automatic Dependent Surveillance-Broadcast Systems** Haomiao Yang,Hongwei Li,Xuemin Sherman Shen,2022-08-23  
This book proposes secure schemes to address security challenges in secure automatic dependent surveillance broadcast systems ADS B from five different angles First the authors examine encryption schemes applied to the ADS B environment for protecting messages confidentiality Second they propose an ADS B broadcast authentication scheme with batch verification by employing an identity based signature Third they present ADS B broadcast authentication scheme based on a digital signature with message recovery which provides a feature that the message is recoverable from the signature Fourth

they propose a new cryptographic solution to ADS B security Finally they propose an accurate and efficient cognitive aircraft location verification scheme preserving aircraft location privacy by utilizing a grid based k nearest neighbor algorithm In summary the authors show how ADS B data links can greatly enhance flight safety by these proposed schemes without sacrificing data security Proposes several secure schemes to address security challenges in secure automatic dependent surveillance broadcast systems ADS B Provides extensive experiments and evaluates the proposed schemes using real world data Shows how ADS B data links can greatly enhance safety without sacrificing data security
