Submarine Escape Action Levels for Selected Chemicals National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Subcommittee on Submarine Escape Action Levels,2002-03-04 On board fires can occur on submarines after events such as collision or explosion These fires expose crew members to toxic concentrations of combustion products such as ammonia carbon monoxide hydrogen chloride and hydrogen sulfide Exposure to these substances at high concentrations may cause toxic effects to the respiratory and central nervous system leading possible to death T protect crew members on disabled submarines scientists at the U S Navy

Health Research Center's Toxicology Detachment have proposed two exposure levels called submarine escape action level SEAL 1 and SEAL 2 for each substance SEAL 1 is the maximum concentration of a gas in a disabled submarine below which healthy submariners can be exposed for up to 10 days without encountering irreversible health effects while SEAL 2 the maximum concentration of a gas in below which healthy submariners can be exposed for up to 24 hours without experiencing irreversible health effects SEAL 1 and SEAL 2 will not impair the functions of the respiratory system and central nervous system to the extent of impairing the ability of crew members in a disabled submarine to escape be rescued or perform specific tasks Hoping to better protect the safety of submariners the chief of the Bureau of Medicine and Surgery requested that the National Research Council NRC review the available toxicologic and epidemiologic data on eight gases that are likely to be produced in a disabled submarine and to evaluate independently the scientific validity of the Navy's proposed SEALs for those gases The NRC assigned the task to the Committee on Toxicology's COT's Subcommittee on Submarine Escape Action Levels The specific task of the subcommittee was to review the toxicologic epidemiologic and related data on ammonia carbon monoxide chlorine hydrogen chloride hydrogen cyanide hydrogen sulfide nitrogen dioxide and sulfur dioxide in order to validate the Navy's proposed SEALs The subcommittee also considered the implications of exposures at hyperbaric conditions and potential interactions between the eight gases Review of Submarine Escape Action Levels for Selected Chemicals presents the subcommittee's findings after evaluation human data from experimental occupational and epidemiologic studies data from accident reports and experimental animal data The evaluations focused primarily on high concentration inhalation exposure studies The subcommittee's recommended SEALs are based solely on scientific data relevant to health effects The report includes the recommendations for each gas as determined by the subcommittee as well as the Navy's original instructions for these substances

Electromagnetic Ergonomics Jolanta Karpowicz, 2023-09-07
Ergonomics is the branch of engineering science in which biological science is used to study the relationship between workers and their environments Because of the use of electricity for many purposes one environmental factor that has become omnipresent today is the electromagnetic field also referred to as electromagnetic radiation or a fraction of the non ionizing radiation The complex interactions of electromagnetic energy with material objects contribute to ergonomics issues because they can cause health hazards in workers trigger accidental situations limit the ability of workers to work safely and disturb the function of electronic devices including medical implants etc A better understanding of complex electromagnetic issues in the work environment is considered in this book This title will be beneficial to workers affected by electromagnetic hazards including wireless transfer of information or power wireless induction heating joining metal elements with electric supplied techniques capacitive heating of dielectric materials physiotherapeutic or cosmetic electromagnetic treatments antitheft gates and other monitoring or control systems using wireless solutions electric transportation and many more It will help prevent common misunderstandings about electromagnetic hazards and sufficiently reduce where they appear

Electromagnetic Ergonomics is designed to have a positive influence on public health and worker safety in the work environment and brings broad benefits in particular with respect to research planning and the interpretation of the results as well as the implementation of science based evidence regarding the evaluation and elimination of EMF hazards in the operations of enterprises and environmental labor and sanitary inspections as well as government regulators responsible for environmental safety issues in the workplace and the daily life environment
