1999 Year Of Diagnostic Radiology:

Cumulated Index Medicus, 1999 Legal Aspects of Radiography and Radiology Bridgit C. Dimond, 2008-04-15 Practical and jargon free this book is aimed at the non lawyer and includes an extensive glossary of terms It emphasises the legal issues encountered by those working in diagnostic radiography radiotherapy and radiology and includes examples of legal dilemmas taken from these disciplines as well as exploring current issues **Molybdenum-99 for Medical Imaging** National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on State of Molybdenum-99 Production and Utilization and Progress Toward Eliminating Use of Highly Enriched Uranium, 2016-11-28 The decay product of the medical isotope molybdenum 99 Mo 99 technetium 99m Tc 99m and associated medical isotopes iodine 131 I 131 and xenon 133 Xe 133 are used worldwide for medical diagnostic imaging or therapy The United States consumes about half of the world's supply of Mo 99 but there has been no domestic i.e. U.S. based production of this isotope since the late 1980s The United States imports Mo 99 for domestic use from Australia Canada Europe and South Africa Mo 99 and Tc 99m cannot be stockpiled for use because of their short half lives Consequently they must be routinely produced and delivered to medical imaging centers Almost all Mo 99 for medical use is produced by irradiating highly enriched uranium HEU targets in research reactors several of which are over 50 years old and are approaching the end of their operating lives Unanticipated and extended shutdowns of some of these old reactors have resulted in severe Mo 99 supply shortages in the United States and other countries Some of these shortages have disrupted the delivery of medical care Molybdenum 99 for Medical Imaging examines the production and utilization of Mo 99 and associated medical isotopes and provides recommendations for medical use **Microdosimetric Response of Physical and Biological Systems to Low- and High-LET Radiations** Yigal Horowitz, 2006-06-07 One of the aims of this book was to focus the attention of specialists to the diversity of the effects of the ionising radiation on biological and physical systems Special emphasis has been placed on the exquisite complexities differences introduced by high ionisation density versus low ionisation density irradiation in both biological and physical systems Scholz Chapter 1 Horowitz Chapter 2 Olko Chapter 3 As well we wanted to point out the need for novel experimental and theoretical approaches required to advance the important fields of micro and nanodosimetry Important first steps have already been taken for example the accelerated application of semiconductor detectors in their various forms to microdosimetry and as well to practical important applications in the radiation dosimetry of oncological procedures Rosenfeld Chapter 6 The vast number of applications of TLD to radiation dosimetry are not neglected a special chapter is devoted to the application of TLDs to medical dosimetry applications Mobit and Kron Chapter 7 as well as a tutorial approach in an additional chapter to the cavity theories required to extrapolate dose from the detector medium to the tissue medium Mobit and Sandison Chapter 5 One of the major features of this book is the intensive in depth coverage of the theory and modelling of TL both from the solid state physics point of view Chen Chapter 4

and the microdosimetric point of view Horowitz Chapter 2 and Olko Chapter 3 The many puzzling quaint quizzical features of TL science can now be understood in the framework of these advanced theoretical models explained in straightforward understandable terms Quantifies unifies the effects of ionising radiation in both the biological and physical systems Authoritative treatment of applications of semiconductor detectors and thermoluminescence dosimeters in medical radiation dosimetry Basic and advanced aspects of microdosimetry applied to both biological and physical systems In depth review of the effects of the density of ionising radiation in tsl and osl Concise and elegant treatment of cavity theory in medical oncological dosimetry Comprehensive review of this important interdisciplinary field including hundreds of illustrations and references

Medical Isotope Production Without Highly Enriched Uranium National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Medical Isotope Production Without Highly Enriched Uranium, 2009-05-27 This book is the product of a congressionally mandated study to examine the feasibility of eliminating the use of highly enriched uranium HEU² in reactor fuel reactor targets and medical isotope production facilities The book focuses primarily on the use of HEU for the production of the medical isotope molybdenum 99 Mo 99 whose decay product technetium 99m³ Tc 99m is used in the majority of medical diagnostic imaging procedures in the United States and secondarily on the use of HEU for research and test reactor fuel The supply of Mo 99 in the U S is likely to be unreliable until newer production sources come online The reliability of the current supply system is an important medical isotope concern this book concludes that achieving a cost difference of less than 10 percent in facilities that will need to convert from HEU to LEU based Mo 99 production is much less important than is reliability of supply
