## **2000 Iucn Red List Of Threatened Species:**

2000 IUCN Red List of Threatened Species Craig Hilton-Taylor, 2000 Release of the 2000 Red List is a major landmark for IUCN It is the first time that listings of animals and plants have been combined and the first time that the Red List has been produced on CD ROM The 2000 Red List combines new assessments including all bird species many antelope and bat species most primates and sharks all Asian freshwater turtles more molluscs and many others with those from previous publications The combination of animals and plants into a single list containing assessments of more than 18 000 taxa 11 000 of which are threatened species and the move towards improved documentation of each species on the list means that a hard copy version of the Red List would run to several volumes This combined with the fact that the Red List will be updated annually led to the decision to release the Red List in electronic format via the World Wide Web and as a CD ROM

Luiz Marques,2020-08-17 This book intends to be an alert to the fact that the curve measuring environmental costs against the economic benefits of capitalism has irreversibly entered into a negative phase The prospect of an environmental collapse has been evidenced by the sciences and the humanities since the 1960s Today it imposes its urgency This collapse differs

from past civilizations in that it is neither local nor just civilizational It is global and occurs at the broadest level of the biosphere accelerated by the convergence of different socio environmental crises such as Earth energy imbalance climate change and global warming Sea level rise Decrease and degradation of forests Collapse of terrestrial and aquatic biodiversity Floods droughts wildfires and extreme weather events Degradation of soils and water resources Increase in pollution caused by fossil fuels and coal Increase in waste production and industrial intoxication The book is divided in two parts In the first part it presents a comprehensive review of scientific data to show the already visible effects of each of the different environmental crises and its consequences to human life on Earth In the second part Luiz Marques critically discusses what he calls the three concentric illusions that prevent us from realizing the gravity of the current socio environmental crises the illusion of a sustainable capitalism the illusion that economic growth is still capable of providing more well being and the anthropocentric illusion Finally Marques argues that fitting back into the biosphere will only be possible if we dismantle the expansive socioeconomic gear that has shaped our societies since the 16th century by moving from a Social Contract to a Natural Contract which takes into account the whole biosphere According to him the future society will be post capitalist or it will not be a complex society and even perhaps we must fear no society at all This book is backed up with the latest and best science and has made the complexities understandable for the average reader all in a context of hope for the future William J Ripple PhD Distinguished Professor of Ecology Director of the Alliance of World Scientists Oregon State University
