Crashworthiness of Transportation Systems: Structural Impact and Occupant Protection Jorge A.C.

Ambrósio, Manuel F.O. Seabra Pereira, F. Pina da Silva, 2012-12-06 A systematic treatment of current crashworthiness practice in the automotive railroad and aircraft industries Structural exterior and interior design occupant biomechanics seat and restraint systems are dealt with taking account of statistical data current regulations and state of the art design tool capabilities Occupant kinematics and biomechanics are reviewed leading to a basic understanding of human tolerance to impact and of the use of anthropometric test dummies and mathematical modelling techniques Different types of restraining systems are described in terms of impact biomechanics The material and structural behaviour of vehicle components is discussed in relation to crash testing A variety of commonly used techniques for simulating occupants and structures are presented in particular the use of multibody dynamics finite element methods and simplified macro elements in the context of design tools of increasing complexity which can be used to model both vehicles and occupants Audience An excellent reference for researchers engineers students and all other professionals involved in crashworthiness work

Handbook Gianpiero Mastinu, Manfred Ploechl, 2014-01-06 Featuring contributions from leading experts the Road and Off Road Vehicle System Dynamics Handbook provides comprehensive authoritative coverage of all the major issues involved in road vehicle dynamic behavior While the focus is on automobiles this book also highlights motorcycles heavy commercial vehicles and off road vehicles The authors of the individual chapters both from automotive industry and universities address

basic issues but also include references to significant papers for further reading. Thus the handbook is devoted both to the beginner wishing to acquire basic knowledge on a specific topic and to the experienced engineer or scientist wishing to have up to date information on a particular subject. It can also be used as a textbook for master courses at universities. The handbook begins with a short history of road and off road vehicle dynamics followed by detailed state of the art chapters on modeling analysis and optimization in vehicle system dynamics vehicle concepts and aerodynamics pneumatic tires and contact wheel road off road modeling vehicle subsystems vehicle dynamics and active safety man vehicle interaction intelligent vehicle systems and road accident reconstruction and passive safety. Provides extensive coverage of modeling simulation and analysis techniques. Surveys all vehicle subsystems from a vehicle dynamics point of view. Focuses on pneumatic tires and contact wheel road off road. Discusses intelligent vehicle systems technologies and active safety. Considers safety factors and accident reconstruction procedures. Includes chapters written by leading experts from all over the world. This text provides an applicable source of information for all people interested in a deeper understanding of road vehicle dynamics and related problems.

Crashworthiness, Occupant Protection and Biomechanics in Transportation Systems--2001 Hikmat Fadhil Mahmood, Saeed D. Barbat, M. R. Baccouche, 2001 IUTAM Symposium on Impact Biomechanics: From Fundamental Insights to Applications M. D. Gilchrist, 2005-10-13

Substantial fundamental work has been undertaken in the different aspects of impact biomechanics over the past three decades. Much of this has been motivated and undertaken by the automotive industry in their efforts to improve transport safety. More recently however it has become apparent that the multidisciplinary synergies which are realised by interactions between engineers, scientists and clinical practitioners will ultimately lead to a greater understanding of the complex interacting phenomena within the human body after it has sustained an impact. In turn this greater depth of knowledge will provide more fundamental insights into the analysis, diagnosis, treatment and prevention of impact injuries across a broader spectrum of accident environments. The scientific focus of this IUTAM symposium is to address those topics that are centrally important to the biomechanics of impact. These can be grouped into those that are concerned with the different causes of accidents e.g. transport, occupational and sports injuries; the mechanics involved in accident analysis e.g. accident investigation, computational modelling techniques; the different types of resulting traumatic injuries including musculoskeletal, organ, spinal and head injuries; methods of assessing the extent of injury e.g. injury assessment, injury criteria; constitutive laws for human tissue and providing protection during an impact e.g. injury prevention, energy absorption materials and safety devices.
