Bibliographies and Literature of Agriculture ,1978 **Agents Transmissible from Simians to Man** Manfred Brack,2012-12-06 The contacts between man and nonhuman primates enable the transmission of microorganisms from one species to the other Such contact may occur at quite different levels man and nonhuman primates may share the same ecosystem including the presence of vectors in the countries of origins of monkeys and apes the animals are captured to be sold or used for food field researchers have to stay near the animals in the wild an uncontrolled human population gets close enough to almost touch the animals in zoological gardens around the world pet owners establish bodily contact and finally researchers doing surgery or necropsies are exposed to an increased number of pathogens liberated from the organs and body fluids Usually monkeys and apes are more threatened with catching the microorganisms indigenous to man than vice versa but nevertheless outbreaks of true zoonoses with nonhuman primates as the source of infection have occurred Also the retransmission of originally human pathogens via nonhuman primates to man may pose a considerable risk to human health Unfortunately the information on the different agents transmissible between man and his relatives is too disseminated for practical use as it involves quite different scientific disciplines such as virology bacteriology parasitology primatology laboratory animal science etc It seemed therefore necessary to compile the current knowledge concerning this topic in a single publication Human infections of simian origin may be caused by several viruses bacteria fungi or endoparasites Ectoparasites in comparison are of little importance

Beyond Anthrax Larry I. Lutwick, Suzanne M. Lutwick, 2008-12-15 Biological warfare has unfortunately in the post 9/11 world become a significant topic of discussion in both the medical and lay presses. In the wake of the biological letter bombs containing anthrax spores, the possibility of biologic and/or toxic attacks on civilians in any part of the world became no longer a possibility. It is now part of common discussion and consciousness. This book presents the history of the topics and clinically relevant discussions on those high risk Category A diseases beyond anthrax, as well as a number of infections and toxins at the Category B level. Importantly, in addition, the text includes sections on Public Health Infrastructure, Public Health Law, Surveillance, Mental Health Management, and Media Role, all of which relate to epidemics of any sort, not just intentional biological events. **Beyond Anthrax: The Weaponization of Infectious Diseases** is a product that should serve as a reference point for clinicians, epidemiologists, and public health personnel to understand in practical detail many of the aspects of weapons of biowarfare, as well as the appropriate responses to them. **Wolves for Yellowstone?: Research and analysis**, 1992
