Dictionary of XML Technologies and the Semantic Web Vladimir Geroimenko, 2012-12-06 The emerging Second Generation Web is based entirely on XML and related technologies It is intended to result in the creation of the Semantic Web on which computers will be able to deal with the meaning semantics of Web data and hence to process them in a more effective and autonomous way This new version of the Web introduces a multitude of novel concepts terms and acronyms Purpose Scope and Methods This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies The ultimate goal of this dictionary is even broader than just to define the meaning of new words it aims to develop a proper understanding of these leading edge technologies To achieve this comprehensible definitions of technical terms are supported by numerous diagrams and code snippets clearly annotated and explained The main areas covered in this dictionary are 1 XML syntax and core technologies such as Namespaces Infoset and XML Schema 2 all the major members of the XML family of technologies such as XSLT XPath and XLink 3 numerous XML based domain specific languages such as NewsML News Markup Language 4 the concept and architecture of the Semantic Web 5 key Semantic Web technologies such as RDF Resource Description Framework RDF Schema and OWL Web Ontology Language and 6 Web services including WSDL Web Services Description Language and SOAP Simple Object Access Protocol

Validating RDF Data Jose Emilio Labra Gayo, Eric Prud'hommeaux, Iovka Boneva, Dimitris Kontokostas, 2022-05-31 RDF and Linked Data have broad applicability across many fields from aircraft manufacturing to zoology Requirements for detecting bad data differ across communities fields and tasks but nearly all involve some form of data validation This book introduces data validation and describes its practical use in day to day data exchange The Semantic Web offers a bold new take on how to organize distribute index and share data Using Web addresses URIs as identifiers for data elements enables the construction of distributed databases on a global scale Like the Web the Semantic Web is heralded as an information revolution and also like the Web it is encumbered by data quality issues The quality of Semantic Web data is compromised by the lack of resources for data curation for maintenance and for developing globally applicable data models At the enterprise scale these problems have conventional solutions Master data management provides an enterprise wide vocabulary while constraint languages capture and enforce data structures Filling a need long recognized by Semantic Web users shapes languages provide models and vocabularies for expressing such structural constraints This book describes two technologies for RDF validation Shape Expressions ShEx and Shapes Constraint

designing E Librarian Services With the help of this system users will be able to retrieve multimedia resources from digital libraries more efficiently than they would by browsing through an index or by using a simple keyword search E Librarian Services combine recent advances in multimedia information retrieval with aspects of human machine interfaces such as the ability to ask questions in natural language they simulate a human librarian by finding and delivering the most relevant documents that offer users potential answers to their queries The premise is that more pertinent results can be retrieved if the search engine understands the meaning of the query the returned results are therefore logical consequences of an inference rather than of keyword matches Moreover E Librarian Services always provide users with a solution even in situations where they are unable to offer a comprehensive answer Visualizing the Semantic Web Vladimir

Geroimenko, Chaomei Chen, 2006-07-01 The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of that vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata and so on Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework OWL Web Ontology Language and many other technologies help to erect a multistory building of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data *Mediating Semantics for Multidisciplinary Collaborative Design* Yongwook Jeong, 2008
