Creating Value In The Network Economy:

CREATING value in the network economy, 1999 **Management Education in the Network Economy** Peter J. van Baalen, Lars T. Moratis, 2012-12-06 In the network economy concepts of management knowledge management learning and business school organization should change Otherwise they will not survive the 21st century Different factors are putting new demand upon providers of management education and traditional providers of management education are faced with new competitors Moreover the dynamics of the playing field have changed as have approaches to management learning Management Education in the Network Economy proposes the idea of networked business school to cope with these challenges The book deals with the following subjects 1 Current economic and organizational realities can best be viewed from the perspective of network organization management knowledge and education should reflect these transformations to survive 2 The idea and organization of management learning are revolutionizing as well as the market for management education which brings about huge changes for business schools 3 Business school particularly should capitalize on these transformations and should strategically re organize and re position themselves to compete in the playing field for management education 4 A networked learning environment is an integrative and effective learning environment for organizing management education in the 21st century network economy 5 The networked business school is the organizational form to survive in the 21st century network economy reflecting the environmental changes and demands and to realize a competitive edge in the field of management education **Strategic Management Accounting in a Network Economy** Wingsun Li, 2023-08-26 This book continues from author's first SMA publication in 2018 also by Springer and discusses the new roles of SMA in the new network economy Emerging digital technologies have revolutionized the business world with groundbreaking rules and innovative business models New knowledge and information technologies have inspired new business ideas and created more information platforms at a lower cost yet highly efficient in the market The new business transformation also encourages more inter organizational cooperation to cope with rapid changes All these novelties add challenges to corporate individuals in managing businesses beyond their organizations in particular financial professionals e.g. CFO who are experts in the team Therefore SMA is assigned a new role in the new network economy Similarly SMA calls for major updates and revisions This urges author to write this book to meet the new demand The author has selected important topics that are particularly pertinent to the new Internet economy These topics include how to make decisions under business uncertainty how to value businesses in general Internet stocks and intangible assets in particular Business collaboration and integration are usual means to acquire synergy value How does SMA help deliver the best results How are business models and information platforms built as sense making revenue models even though these platforms never charge for services How is market power and brand value measured How does trust supplement control in new network organizations Finally how is value created captured and allocated in a fair manner The book goes through detailed

examinations of each topic with cases examples and illustrations as required

Re-Constructing the Global Network Economy Andrew Taylor, Adam Bronstone, 2022-10-07 This book looks at how to build more resilience into socio economic networks within local communities Understanding the relationships between attachment to place complex systems and patterns of knowledge creation is not straightforward but these relationships are emerging as the challenges that we face in bridging the gap between the social worlds that we inhabit and an emerging digital world These issues have been brought into even sharper focus through changes resulting from the COVID 19 pandemic On the one hand forced familiarity with communication technologies is driving globalisation forwards whilst on the other the crisis has created awareness of dependencies and heightened desires for more local solutions Plenty of books have been written about the rise of digital networks and the decline of local communities This book takes a radical approach by identifying how these trends fit together and provides examples of how digital networks can be made to work for the local as well as the global economy Using a case study approach the book offers a clear sighted view of the role of relational capital in specific places and organisations and shows the transformational impact that they can have at a micro level The book deliberately seeks to shake up preconceived ideas and is ideal for strategy practitioners and policy makers within governments and NGOs involved in connecting local to wider network economies
