Cranial And Postcranial Skeletal Remains From Easter Island:

Cranial and Postcranial Skeletal Remains from Easter Island Rupert Ivan Murrill, 1968-07-12 Cranial and Postcranial Skeletal Remains from Easter Island was first published in 1968 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions An archaeological expedition to Easter Island and the East Pacific was organized and financed by Thor Heyerdahl the Norwegian anthropologist of Kon Tiki fame in 1955 1956 Although Professor Murrill was not a member of the expedition he was asked to study and analyze from the standpoint of physical anthropology the human skeletal material which was found by the expedition in excavations on Easter Island Professor Murrill conducted a detailed examination of the remains using such methods as metrical measurements morphological observations and analyses of blood group gene frequencies In this book he presents the factual data resulting from his study much of it in the form of comprehensive tables and his conclusions The findings throw significant light on the question of where the prehistoric Easter Islanders came from Contrary to theories favored by Mr Heyerdahl and others that these people and their culture derived from prehistoric settlements on the west coast of South America Professor Murrill concludes that the Easter Island people were Polynesian in origin and that they may have come from the Marquesas Islands He finds it unlikely that a Negroid migration possibly from Melanesia antedated a Polynesian one to Easter Island and on the basis of his evaluation of blood group systems he suggests that the Polynesian and the American Indian types may be derived from the same gene pool in East Asia The book is illustrated with photographs drawings and maps and there is a substantial bibliography

Cranial and Postcranial Skeletal Remains from Easter Island Rupert I. Inventing 'Easter Island' Beverley Haun, 2008-01-01 Easter Island or Rapa Nui as it is known to its inhabitants is located in the Pacific Ocean 3600 kilometres west of South America Annexed by Chile in 1888 the island has been a source of fascination for the world beyond the island since the first visit by Europeans in 1722 due to its intriguing statues and complex history *Inventing Easter Island* examines narrative strategies and visual conventions in the discursive construction of Easter Island as distinct from the native conception of Rapa Nui It looks at the geographic imaginary that pervaded the eighteenth century a period of overwhelming imperial expansion Beverley Haun begins with a discussion of forces that shaped the European version of island culture and goes on to consider the representation of that

culture in the form of explorer texts and illustrations as well as more recent texts and images in comic books and kitsch from off the island Throughout Easter Island is used as a case study of the impact of imperialism on the view of a culture from outside The study hinges on three key points an inquiry into the formation of Easter Island as a subject an examination of how the constructed space and culture have been shaped reshaped and represented in discursive spaces and a discussion of cultural memory and how the constraints of foreign texts and images have shaped thought and action about Easter Island Richly illustrated and unique in its findings *Inventing Easter Island* will appeal to cultural theorists anthropologists educators and anyone interested in the history of the South Pacific

The Oxford Handbook of Prehistoric Oceania Ethan E. Cochrane, Terry L. Hunt, 2018 Oceania was the last region on earth to be permanently inhabited with the final settlers reaching Aotearoa New Zealand approximately AD 1300 This is about the same time that related Polynesian populations began erecting Easter Island's gigantic statues farming the valley slopes of Tahiti and similar islands and moving finely made basalt tools over several thousand kilometers of open ocean between Hawai'i the Marquesas the Cook Islands and archipelagos in between The remarkable prehistory of Polynesia is one chapter of Oceania's human story Almost 50 000 years prior people entered Oceania for the first time arriving in New Guinea and its northern offshore islands shortly thereafter a biogeographic region labelled Near Oceania and including parts of Melanesia Near Oceania saw the independent development of agriculture and has a complex history resulting in the greatest linguistic diversity in the world Beginning 1000 BC after millennia of gradually accelerating cultural change in Near Oceania some groups sailed east from this space of inter visible islands and entered Remote Oceania rapidly colonizing the widely separated separated archipelagos from Vanuatu to Samoa with purposeful return voyages and carrying an intricately decorated pottery called Lapita From this common cultural foundation these populations developed separate but occasionally connected cultural traditions over the next 3000 years Western Micronesia the archipelagos of Palau Guam and the Marianas was also colonized around 1500 BC by canoes arriving from the west beginning equally long sequences of increasingly complex social formations exchange relationships and monumental constructions All of these topics and others are presented in *The Oxford Handbook of Prehistoric Oceania* written by Oceania's leading archaeologists and allied researchers Chapters describe the cultural sequences of the region's major island groups provide the most recent explanations for diversity and change in Oceanic prehistory and lay the foundation for the next generation of research

Island at the Edge of the World Mike Pitts, 2025-09-11 The true and fascinating story of Easter Island and its amazing statues KEN FOLLETT Intelligent balanced and accessible CHRIS GOSDEN Where did they come from How did they get there Why did they carve the island's colossal iconic statues and how What happened to the civilisation they created These are just a few of the questions about Easter Island or Rapa Nui that have puzzled generations Europeans first encountered the Islanders in the early eighteenth century bringing back astonishing tales from one of the most remote inhabited places on Earth They told fantastic stories of lost continents cannibalism giants and aliens Thor Heyerdahl claimed that the island was discovered by pale skinned sailors from South America ignoring the rightful claims of the greatest explorers the world has ever known Recently the idea that Islanders cut down all the trees causing mass starvation and social collapse has been espoused by scientists broadcasters and politicians Now in archaeologist Mike Pitts's superb investigation *Island at the Edge of the World* he provides authoritative new insights into what really happened Using the latest scientific and archaeological research plus a huge range of historical accounts Pitts builds a fascinating new portrait of the Islanders story In particular Pitts revives the life work of Katherine Routledge who spent sixteen months on the island in 1914 15 surviving revolution and war assembling a priceless but largely ignored archive of excavations and interviews and whose legacy reveals the rapacious interference that spawned generations of false histories Many questions still remain but this is the most compelling and comprehensive account yet published of the extraordinary story of Easter Island
