*The Impact of Extreme Weather Events on Public Health* Yanlin Niu, Jinghong Gao, Michael Tong, Sotiris Vardoulakis, 2025-09-10 According to the Intergovernmental Panel on Climate Change IPCC's Sixth Assessment Report the rise in anthropogenic greenhouse gases has increased the frequency and intensity of extreme weather events such as heatwaves drought wildfire cyclones and heavy precipitation that could cause floods and landslides and the probability of compound events Such extreme weather events have a negative impact on human health including heat related illnesses injuries infectious diseases chronic non communicable diseases and mental health either directly or indirectly In 2022 at least five record breaking heatwaves occurred in Europe with summer temperatures reaching 47 C resulting in over 16 000 excess deaths while droughts affected 88.9 million people in Africa Hurricane Ian alone caused damage costing US 100 billion in the Americas Clearly the impact of extreme weather events on public health is not a distant concern but an imminent and pressing threat

Extreme Weather Philip John Sallis, 2018-08-29 The term extreme weather normally conjures up thoughts of massive storms or heat waves or overtly cold temperatures These are all examples of what we might consider as weather events that occur out of the ordinary or what is regarded as the normal pattern of calm heat cold dry or wet conditions for one season of the year or another The point is that if we consider an oscillation of data points in a weather pattern and plot a mean through it extreme weather can be observed as a perturbation in a distribution of climatic events over time These events may be short lived such as a wind gust occurrence or of longer duration such as heavy rain leading to flooding Importantly once initiated a perturbation event has an associated consequence which usually requires human intervention to rectify the event's consequences

**Global Climate Change and Extreme Weather Events** Institute of Medicine, Board on Global Health, Forum on Microbial Threats, 2008-10-23 Long before the germ theory of disease was described late in the nineteenth century humans knew that climatic conditions influence the appearance and spread of epidemic diseases Ancient notions about the effects of weather and climate on disease remain embedded in our collective consciousness through expressions such as cold for rhinovirus infections malaria derived from the Latin for bad air and the common complaint of feeling under the weather Today evidence is mounting that earth's climate is changing at a faster rate than previously appreciated leading researchers to view the longstanding relationships between climate and disease with new urgency and from a global perspective On December 4 and 5 2007 the Forum on Microbial Threats hosted a public workshop in Washington DC to consider the possible infectious disease impacts of global climate change and extreme weather events on human animal and plant health as well as their expected implications for global and national security

**Extreme Events in the Developing World** Emma Rosa Mary Archer, Katharine Emma Vincent, Andrew John Dougill, Marta Bruno Soares, Chris C. Funk, 2022-11-25 *Extreme Weather in Alaska* United States. Swanson, Francois Vezina, Andreas Nord, Andrew McKechnie, 2022-11-03 **Mediating Climate Change** Dr Julie Doyle, 2013-01-28 Climate change has been a significant area of scientific concern since the late 1970s but has only recently entered mainstream

culture and politics However as media coverage of climate change increases in the twenty first century the gap between our understanding of climate change and climate action appears to widen In this timely book Julie Doyle explores how practices of mediation and visualisation shape how we think about address and act upon climate change Through historical and contemporary case studies drawn from science media politics and culture Mediating Climate Change identifies the representational problems climate change poses for public and political debate It offers ways forward by exploring how climate change can be made more meaningful through for example innovative forms of climate activism the reframing of meat and dairy consumption media engagement with climate events and science and artistic experimentation Doyle argues that cultural discourses have problematically situated nature and the environment as objects externalised from humans and culture Mediating Climate Change calls for a more nuanced understanding of human environmental relations in order for us to be able to more fully imagine and address the challenges climate change poses for us all Earth Hums Constantly Raina
