A Conceptual Framework for SMART Applications in Higher Education: Emerging Research and Opportunities Connelly, James Orion, Miller, Paula, 2019-11-01 With the rapid availability of information it becomes essential to keep pace with this availability as well as process the information into knowledge that has real world applications Neuroscientific methods allow an approach to this problem based on the way that the human brain already operates Over the centuries and through observation and trial and error we already know a great deal about how we can teach and learn but now we can verify this with scientific fact and discover previously unknown aspects of brain physiology These observations of brain functioning have produced many learning theories all of which have varying degrees of validity These theories in turn give birth to theories and models of instructional design which also have varying degrees of validity A Conceptual Framework for SMART Applications in Higher Education Emerging Research and Opportunities is a critical scholarly publication that explores how the brain acquires and processes information to turn information into knowledge and the role of SMART technology and how it combines and

integrates visual and aural data to facilitate learning The book also discusses ways to apply what is known about teaching to how the brain operates and how to incorporate instructional design models into the teaching and learning process
