Creation And History:

Vestiges of the Natural History of Creation Robert Chambers, Alexander Ireland, 1884 [The History of Creation](#), Vol. 1 of 2 Ernst Haeckel, 2015-06-15 Excerpt from The History of Creation Vol 1 of 2 Or the Development of the Earth and Its Inhabitants by the Action of Natural Causes a Popular Exposition of the Doctrine of Evolution in General and of That of Darwin Goethe and Lamarck in Particular I am desirous of prefacing the English edition of the History of Creation with a few remarks which may serve to explain the origin and object of this book In the year 1866 I published under the title *Generelle Morphologie* a somewhat comprehensive work which constituted the first attempt to apply the general doctrine of development to the whole range of organic morphology Anatomy and Biogenesis and thus to make use of the vast march onwards which the genius of Charles Darwin has effected in all biological science by his reform of the Descent Theory and its establishment through the doctrine of selection At the same time in the *Generelle Morphologie* the first attempt was made to introduce the Descent Theory into the systematic classification of animals and plants and to found a natural system on the basis of genealogy that is to construct hypothetical pedigrees for the various species of organisms The *Generelle Morphologie* found but few readers for which the voluminous and unpopular style of treatment and its too extensive Greek terminology may be chiefly to blame About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works *The history of Creation: or, The development of the earth and its inhabitants by the action of natural causes* Ernst Heinrich P.A. Haeckel, 1876 [The History of Creation](#) Ernst Heinrich Philipp August Haeckel, Edwin Ray Lankester, 2019-06-28 **Reframing Biblical Theology** Daniel C. Fredericks, 2025-08-26 Biblical theology is adequate only if wholly contextualized within the eternal natures of God creation and history A more thorough awareness of God's eternal design within creation and its history and a fuller perspective on the Messiah's commission avoids significant discontinuities such as universal and redemptive histories the gospels of Jesus and his apostles cross and kingdom of God centers heaven and a new earth and the role of sanctification in the Old and New Testaments This study suggests that God's eternal design for creation and its history subsumes a limited biblical theology that focuses on the solution to the sin problem at the expense of what has always been the eternal practical and productive objective of that solution and its current implications The church can focus on an urgent need for the rescue at the expense of the equally urgent and eternal purpose for that rescue A more comprehensive practical and productive theology of endless creation and its history contextualizes salvation and its eschatological focus by enveloping them as temporary components

The History of Creation Ernst Haeckel, 2019-01-03 Originally published in 1899, *The History of Creation* was the first book of its kind to apply a doctrine to the whole range of organic morphology and make use of the effect Darwin had on biological sciences during the 19th century. Haeckel looks at Darwin's reform of Descent Theory and its establishment through the doctrine of selection. He introduces Descent Theory into the systematic classification of animals and plants and finds a natural system on the basis of genealogy that is to construct hypothetical pedigrees for the various species of organisms.
