The Uniform Trade List Annual ,1873 With alphabetical indexes of firms and trade specialties *Atomic Geography* Melvin R. Adams,2021-06-18 I have spent a career sifting through the rubble the abandoned documents the factories and tools with the thought of saving what remains of water land and animals But water wind and root have their way Melvin R Adams Perhaps the first environmental engineer at Hanford Adams spent twenty four years on its 586 square miles His thoughtful vignettes recall challenges and sites he worked on or found personally intriguing like the 216 U pond Nestled among the trees the pond looks like a pleasant place to go fishing In reality it has been contaminated with plutonium longer than any other place on earth In what Adams considers his most successful project he helped determine the initial scope of

the soil and solid waste cleanup The Environmental Restoration and Disposal Facility today covers 107 acres and has a capacity of 18 million tons His group also designed and tested a marked maintenance free disposal barrier It uses natural materials that will remain stable for thousands of years They expanded a network of groundwater monitoring wells to define contaminated plumes assess treatment effectiveness and provide relevant data to hydrologists They also developed a pilot scale pump and treatment plant for use on a four square mile carbon tetrachloride plume His environmental and engineering unit included a biological control group fondly dubbed The Weeds They controlled tumbleweeds tracked and collected plants and animals found growing or digging in contaminated sites and caught stray wildlife discovered in Hanford offices In Atomic Geography Adams presents some surprising revelations He shares his perspective on leaking high level waste storage tanks dosimeters and Hanford's obsession with safety He answers the question he is asked most insisting he does not glow in the dark He leaves that to spent fuel rods in water storage basins a phenomenon known as Cherenkov radiation
