**Mathematical Knowledge in Classroom Interaction** Heinz Steinbring, 2006-03-30 Mathematics is generally considered as the only science where knowledge is uniform universal and free from contradictions Mathematics is a social product a net of norms as Wittgenstein writes In contrast to other institutions traffic rules legal systems or table manners which are often internally contradictory and are hardly ever unrestrictedly accepted mathematics is distinguished by coherence and consensus Although mathematics is presumably the discipline which is the most differentiated internally the corpus of mathematical knowledge constitutes a coherent whole The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics Heintz 2000 p 11 The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge In an extensive study Bettina Heintz Heintz 2000 proposed that the historical development of

formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way

*Our Times, Our Lives* Eve Otto, Jozef Otto, 2004-11 Eve Otto explains When I began writing this book I had in the back of my mind that those who are young now might someday be interested in what life was like when their grandparents were growing up how life changed drastically with the coming of World War II in Europe and the turbulent years that followed the traumas of our emigration to America with our three young children and the difficult adjustments we had to make My book then is sort of a legacy to them

**Inner Aspect** Lisa deMena Travis, 2010-09-02 Finishing this book was one of the most difficult things I have ever done It took far too long from original idea to page proofs and suffered from being relegated to small corners of my life It was very rarely on the front burner Since I started working on this topic in 1991 there has been a lot of interesting work done on the areas of the articulation of VP phrase structure mirroring event structure the use of functional categories to represent Aktionsart and many other areas that the research presented here touches on The hardest thing about doing a project of this size is to accept that not everyone's

ideas can be addressed and not all new research can be incorporated The only way that I have found it possible to let this book go to press is to reread the Preface to *Events in the Semantics of English* by Terence Parsons where he writes The goal of this book is neither completeness nor complete accuracy it is to get some interesting proposals into the public arena for others to criticize develop and build on My aim in this book is to make connections between various accounts of various constructions in various languages at the risk of treating each of these too lightly I am grateful to too many people to thank them individually
