Quantifying and Exploring the Gap Between FPGAs and ASICs Ian Kuon, Jonathan Rose, 2010-07-03 Field programmable gate arrays FPGAs which are pre fabricated programmable digital integrated circuits ICs provide easy access to state of the art integrated circuit process technology and in doing so democratize this technology of our time This book is about comparing the qualities of FPGA their speed performance area and power consumption against custom fabricated ICs and exploring ways of mitigating their deficiencies This work began as a question that many have asked and few had the resources to answer how much worse is an FPGA compared to a custom designed chip As we dealt with that question we found that it was far more difficult to answer than we anticipated but that the results were rich basic insights on fundamental understandings of FPGA architecture It also encouraged us to find ways to leverage those insights to seek ways to make FPGA technology better which is what the second half of the book is about While the question How much worse is an FPGA than an ASIC has been a constant sub theme of all research on FPGAs it was posed most directly some time around May 2004 by Professor Abbas El Gamal from Stanford University to us he was working on a 3D FPGA and was wondering if any real measurements had been made in this kind of comparison Shortly thereafter we took it up and tried to answer in a serious way

Micro-Manufacturing Technologies and Their Applications Irene Fassi, David Shipley, 2017-01-31 This book provides in depth theoretical and practical information on recent advances in micro manufacturing technologies and processes covering such topics as micro injection moulding micro cutting micro EDM micro assembly micro additive manufacturing moulded interconnected devices and microscale metrology It is designed to provide complementary material for the related e learning platform on micro manufacturing developed within the framework of the Leonardo da Vinci project 2013 3748 542424 MIMAN T Micro Manufacturing Training System for SMEs The book is mainly addressed to technicians and prospective professionals in the sector and will serve as an easily usable tool to facilitate the translation of micro manufacturing technologies into tangible industrial benefits Numerous examples are included to assist readers in learning and implementing the described technologies In addition an individual chapter is devoted to technological foresight addressing market analysis and business models for micro manufacturers

Machine Learning-based Prediction of Missing Parts for Assembly Fabian Steinberg, 2024-06-18 Manufacturing companies face challenges in managing increasing process complexity while meeting demands for on time delivery particularly evident during critical

processes like assembly The early identification of potential missing parts at the beginning assembly emerges as a crucial strategy to uphold delivery commitments This book embarks on developing machine learning based prediction models to tackle this challenge Through a systemic literature review deficiencies in current predictive methodologies are highlighted notably the underutilization of material data and a late prediction capability within the procurement process Through case studies within the machine industry a significant influence of material data on the quality of models predicting missing parts from in house production was verified Further a model for predicting delivery delays in the purchasing process was implemented which makes it possible to predict potential missing parts from suppliers at the time of ordering These advancements serve as indispensable tools for production planners and procurement professionals empowering them to proactively address material availability challenges for assembly operations

Handbook of Silicon Wafer Cleaning Technology Karen Reinhardt, Werner Kern, 2018-03-16 Handbook of Silicon Wafer Cleaning Technology Third Edition provides an in depth discussion of cleaning etching and surface conditioning for semiconductor applications The fundamental physics and chemistry associated with wet and plasma processing are reviewed including surface and colloidal aspects This revised edition includes the developments of the last ten years to accommodate a continually involving industry addressing new technologies and materials such as germanium and III V compound semiconductors and reviewing the various techniques and methods for cleaning and surface conditioning Chapters include numerous examples of cleaning technique and their results The book helps the reader understand the process they are using for their cleaning application and why the selected process works For example discussion of the mechanism and physics of contamination metal particle and organic includes information on particle removal metal passivation hydrogen terminated silicon and other processes that engineers experience in their working environment In addition the handbook assists the reader in understanding analytical methods for evaluating contamination The book is arranged in an order that segments the various cleaning techniques aqueous and dry processing Sections include theory chemistry and physics first then go into detail for the various methods of cleaning specifically particle removal and metal removal amongst others Focuses on cleaning techniques including wet plasma and other surface conditioning techniques used to manufacture integrated circuits Reliable reference for anyone that manufactures integrated circuits or supplies the semiconductor and microelectronics industries Covers processes and equipment as well as new materials and changes required for the surface conditioning process

Designing Socially Embedded Technologies in the Real-World Volker Wulf, Kjeld Schmidt, David Randall, 2015-07-03 This book is concerned with the associated issues between the differing paradigms of academic and organizational computing infrastructures Driven by the increasing impact Information Communication Technology ICT has on our working and social lives researchers within the Computer Supported Cooperative Work CSCW field try and find ways to situate new hardware and software in rapidly changing socio digital ecologies Adopting a design orientated research perspective researchers from the European Society

for Socially Embedded Technologies EUSSET elaborate on the challenges and opportunities we face through the increasing permeation of society by ICT from commercial academic design and organizational perspectives Designing Socially Embedded Technologies in the Real World is directed at researchers industry practitioners and will be of great interest to any other societal actors who are involved with the design of IT systems Production Planning with Capacitated Resources and Congestion Hubert Missbauer,Reha Uzsoy,2020-02-26 This book presents a comprehensive overview of recent developments in production planning The monograph begins with an introductory chapter reviewing the need for these production planning models that operate by determining time phased releases of work into the facility or supply chain relating these to the Manufacturing Planning and Control MPC and Advanced Planning and Scheduling APS frameworks that form the basis of most academic research and industrial practice The extensive body of work on Workload Control is also placed in this context and proves the need for improved models with a discussion of the difficulties these approaches encounter The next two chapters present a detailed review of the state of the art in optimization models based on exogenous planned lead times and examines the cases where these can take both integer and fractional values The difficulties arising in estimating planned lead times are consistent with factory behavior which are highlighted noting that many of these lead to non convex optimization models Attempts to address these difficulties by iterative multimodel approaches that combine simulation and mathematical programming are also discussed in detail The next three chapters of the volume address the set of techniques developed using clearing functions which represent the expected output of a resource in a planning period as a function of the expected workload of the resource during that period The chapters on this subject propose a basic optimization model for multiple products discuss the difficulties of this model and some possible solutions It also reviews prior work and discuss a number of alternative formulations of the clearing function concept with their respective advantages and disadvantages Applications to lot sizing decisions and a number of other specific problems are also described This volume concludes with an assessment of the state of the art described in the volume and several directions for future work
