1985 Acl Proceedings:

Proceedings of the 1985 Annual Meeting ACL,1985-09-01 **Morphology and Computation** Richard William Sproat,1992 This book provides the first broad yet thorough coverage of issues in morphological theory It includes a wide array of techniques and systems in computational morphology including discussion of their limitations and describes some unusual applications Sproat motivates the study of computational morphology by arguing that a computational natural language system such as a parser or a generator must incorporate a model of morphology He discusses a range of applications for programs with knowledge of morphology some of which are not generally found in the literature Sproat then provides an overview of some of the basic descriptive facts about morphology and issues in theoretical morphology and lexical phonology as well as psycholinguistic evidence for human processing of morphological structure He take up the basic techniques that have been proposed for doing morphological processing and discusses at length various systems such as DECOMP and KIMMO that incorporate part or all of those techniques pointing out the inadequacies of such systems from both a descriptive and a computational point of view He concludes by touching on interesting peripheral areas such as the analysis of complex nominals in English and on the main contributions of Rumelhart and McClelland s connectionism to the computational analysis of words **Grading Knowledge** Steffen Staab,2003-06-26 This book develops concise and comprehensive concepts for extracting degree information from natural language texts First an overview of the ParseTalk information extraction system is given Then from the review of relevant linguistic literature the author derives two distinct categories of natural language degree expressions and proposes knowledge intensive algorithms to handle their analyses in the ParseTalk system Moreover for inferencing the author generalizes from well known constraint propagation mechanisms The concepts and methods developed are applied to text domains from medical diagnosis and information technology magazines The conclusion of the book gives an integration of all three levels of understanding resulting in more advanced and more efficient information extraction mechanisms Practical Course in Terminology Processing Juan C. Sager,1990-01-01 Since the advent of the computer terminology management can be carried out by almost anyone who has learnt to use a computer Terminology management has proved to be an efficient tool in international communications in industry education and international organisations Software packages are readily available and international corporations often have their own terminology database Following these developments translators and terminologists are confronted with a specialised form of information management involving compilation and standardisation of vocabulary storage retrieval and updating A Practical Course in Terminology Processing provides the key to methods of terminology management for the English language for general and specific purposes This unique course has been developed on the basis of years of teaching experience and research at the University of Manchester Institute of Science and Technology UMIST UK and is particularly suitable for translation courses freelance translators technical writers as well as for non linguists who are confronted with

terminology processing as part of their profession The 1996 reprint of the paperback edition includes an index

Knowledge-engineering Shells: Systems And Techniques Nikolas G Bourbakis,1993-09-30 This book offers a systematic approach to knowledge engineering problems It gives a brief overview of knowledge engineering systems and environments covering both classical and recent techniques of the design and evaluation of them Detailed descriptions of particular techniques and applications are also provided

Translation Engines: Techniques for Machine Translation Arturo Trujillo,2012-12-06 Machine translation MT is the area of computer science and applied linguistics dealing with the translation of human languages such as English and German MT on the Internet has become an important tool by providing fast economical and useful translations With globalisation and expanding trade demand for translation is set to grow Translation Engines covers theoretical and practical aspects of MT both classic and new including Character sets and formatting languages Translation memory Linguistic and computational foundations Basic computational linguistic techniques Transfer and interlingua MT Evaluation Software accompanies the text providing readers with hands on experience of the main algorithms

Natural Language Generation in Artificial Intelligence and Computational Linguistics Cecile L. Paris,William R. Swartout,William C. Mann,2013-03-14 One of the aims of Natural Language Processing is to facilitate the use of computers by allowing their users to communicate in natural language There are two important aspects to person machine communication understanding and generating While natural language understanding has been a major focus of research natural language generation is a relatively new and increasingly active field of research This book presents an overview of the state of the art in natural language generation describing both new results and directions for new research The principal emphasis of natural language generation is not only to facili tate the use of computers but also to develop a computational theory of human language ability In doing so it is a tool for extending clarifying and verifying theories that have been put forth in linguistics psychology and sociology about how people communicate A natural language generator will typically have access to a large body of knowledge from which to select information to present to users as well as numer of expressing it Generating a text can thus be seen as a problem of ous ways decision making under multiple constraints constraints from the propositional knowledge at hand from the linguistic tools available from the communicative goals and intentions to be achieved from the audience the text is aimed at and from the situation and past discourse Researchers in generation try to identify the factors involved in this process and determine how best to represent the factors and their dependencies

Computational and Conversational Discourse Eduard H. Hovy,Donia R. Scott,1996-09-17 This fascinating volume is based on a multidisciplinary workshop for

linguists sociologists and computational linguists The authors discuss their favorite burning issues in discourse and display their own methodologies and styles of argumentation

Natural Language Parsing and Linguistic Theories U. Reyle, C. Rohrer, 2012-12-06 presupposition fails we now give a short introduction into Unification Grammar Since all implementations discussed in this volume use PROLOG with the exception of BlockjHaugeneder we felt that it would also be useful to explain the difference between unification in PROLOG and in UG After the introduction to UG we briefly summarize the main arguments for using linguistic theories in natural language processing We conclude with a short summary of the contributions to this volume

UNIFICATION GRAMMAR 3 Feature Structures or Complex Categories Unification Grammar was developed by Martin Kay Kay 1979 Martin Kay wanted to give a precise definition and implementation of the notion of feature Linguists use features at nearly all levels of linguistic description In phonetics for instance the phoneme b is usually described with the features bilabial voiced and nasal In the case of b the first two features get the value the third nasal gets the value Feature value pairs in phonology are normally represented as a matrix bilabial voiced I nasal Feature matrix for b In syntax features are used for example to distinguish different noun classes The Latin noun murus would be characterized by the following feature value pairs gender masculin number singular case nominative pred murus Besides a matrix representation one frequently finds a graph representation for feature value pairs The edges of the graph are labelled by features The leaves denote the value of a feature

Handbook of Natural Language Processing Robert Dale, Hermann Moisl, Harold Somers, 2000-07-25 This study explores the design and application of natural language text based processing systems based on generative linguistics empirical corpus analysis and artificial neural networks It emphasizes the practical tools to accommodate the selected system

Semantics and The Lexicon James Pustejovsky, 2012-12-06 The goal of this book is to integrate the research being carried out in the field of lexical semantics in linguistics with the work on knowledge representation and lexicon design in computational linguistics Rarely do these two camps meet and discuss the demands and concerns of each other's fields Therefore this book is interesting in that it provides a stimulating and unique discussion between the computational perspective of lexical meaning and the concerns of the linguist for the semantic description of lexical items in the context of syntactic descriptions This book grew out of the papers presented at a workshop held at Brandeis University in April 1988 funded by the American Association for Artificial Intelligence The entire workshop as well as the discussion periods accompanying each talk were recorded Once complete copies of each paper were available they were distributed to participants who were asked to provide written comments on the texts for review purposes

VII JAMES PUSTEJOVSKY 1 INTRODUCTION There is currently a growing interest in the content of lexical entries from a theoretical perspective as well as a growing need to understand the organization of the lexicon from a computational view This volume attempts to define the directions that need to be taken in order to achieve the goal of a coherent theory of lexical organization

Routledge Dictionary of

Language and Linguistics Hadumod Bussmann, 2006-02-20 The Routledge Dictionary of Language and Linguistics is a unique reference work for students and teachers of linguistics The highly regarded second edition of the Lexikon der Sprachwissenschaft by Hadumod Bussmann has been specifically adapted by a team of over thirty specialist linguists to form the most comprehensive and up to date work of its kind in the English language In over 2 500 entries the Dictionary provides an exhaustive survey of the key terminology and languages of more than 30 subdisciplines of linguistics With its term based approach and emphasis on clear analysis it complements perfectly Routledge s established range of reference material in the field of linguistics

Linguistic Issues in Machine Translation Frank Van Eynde, 2015-12-17 The key assumption in this text is that machine translation is not merely a mechanical process but in fact requires a high level of linguistic sophistication as the nuances of syntax semantics and intonation cannot always be conveyed by modern technology The increasing dependence on artificial communication by private and corporate users makes this research area an invaluable element when teaching linguistic theory

Natural Language Processing in LISP Gerald Gazdar, Christopher S. Mellish, 1989 *Words and Intelligence I* Khurshid Ahmad, Christopher Brewster, Mark Stevenson, 2007-05-03 Yorick Wilks is a central figure in the fields of Natural Language Processing and Artificial Intelligence His influence extends to many areas and includes contributions to Machines Translation word sense disambiguation dialogue modeling and Information Extraction This book celebrates the work of Yorick Wilks in the form of a selection of his papers which are intended to reflect the range and depth of his work The volume accompanies a Festschrift which celebrates his contribution to the fields of Computational Linguistics and Artificial Intelligence The papers include early work carried out at Cambridge University descriptions of groundbreaking work on Machine Translation and Preference Semantics as well as more recent works on belief modeling and computational semantics The selected papers reflect Yorick s contribution to both practical and theoretical aspects of automatic language processing
