**Industry** Raymond A. Young, Masood Akhtar, 1997-11-19 Solving the pulp and paper industries environmental problems is essential to maintaining the forest industry and accommodating the changing economic needs of forest communities This book explores the construction of new mills operating on new technology that does not produce pollutants which are vital to the pulp and paper industry      **Biofuels** Ayhan Demirbas, 2008-11-14 Biofuel is a renewable energy source produced from

natural materials The benefits of biofuels over traditional petroleum fuels include greater energy security reduced environmental impact foreign exchange savings and socioeconomic issues related to the rural sector The most common biofuels are produced from classic food crops that require high quality agricultural land for growth However bioethanol can be produced from plentiful domestic cellulosic biomass resources such as herbaceous and woody plants agricultural and forestry residues and a large portion of municipal and industrial solid waste streams There is also a growing interest in the use of vegetable oils for making biodiesel Biofuels Securing the Planet's Future Energy Needs discusses the production of transportation fuels from biomass such as wood straw and even household waste by Fischer Tropsch synthesis The book is an important text for students and researchers in energy engineering as well as professional fuel engineers      *Kirk-Othmer*
