Social Studies of Science and Technology: Looking Back, Ahead B. Joerges, H. Nowotny, 2012-12-06 BERNWARD JOERGES AND HELGA NOWOTNY YET ANOTHER TURN The thing that doesn't fit is the thing that's most interesting Richard Feynman This volume was originally conceived as a contribution to yet another turn not captured by one of the many adjectives that have served to describe the collective meandering of the scholarly community in search of direction It was meant to mark the millennial turn a seemingly purely chronological event but one in search for great meanings and invested with loaded significances The editors wanted to seize the opportunity of the moment in order to pause and reflect on the sociology and history of social studies of science and technology The moment came and went and the new millennium barely nine months later thrust its historical marker upon the world through a horrendous and cruel shock in an unforeseen and unforeseeable way Since then the world appears more vulnerable and volatile fragmented and fraught with uncertainty The universal values as bequeathed by the Enlightenment are either refused or appear refuted The dream of a universal civilization which has accompanied the unfolding of the existing multiple modernities in their historically unique trajectories has been discarded and its promises in tatters

Resources in Education, 1999-10 *Discovering the Nanoscale* Davis Baird, Alfred Nordmann, Joachim Schummer, 2004 I recommend this book to anyone interested in learning the history of nanoscale science and to those who would like to better understand some of the ethical legal and social dilemmas to what I believe has rightly been labeled the

technology of the 21st century Rocky Rawstern Nanotechnology Now Science and engineering industry and politics environmentalists and transhumanists are Discovering the Nanoscale Policy makers are demanding explicit consideration of ethical legal and social aspects and popular books are explaining the achievements and promises of nanoscience It may therefore seem surprising that this is the first collection of studies that considers nanoscience and nanotechnologies from the critical perspective of Science and Technology Studies STS However when one appreciates that such a critical perspective needs to be historically informed it often involves intimate acquaintance with the research process Accordingly this book on the historical analytical and ethical study of nanoscience and technology has come together in a period of several years Though it presents only first results these results for the most part stem from sustained investigations of nanoscience and nanotechnologies and of the contexts that are shaping their development Nanoscience and technologies are developing very quickly and for this reason both pose a challenge to the more reflective approach commonly taken by science studies while at the same time requiring the perspective provided by science studies scholars Many are convinced that nothing meaningful can be said about the social and ethical implications of nanotechnologies at this early stage but one can already see what programmatic attitudes go into nanoscale research what metaphors are shaping it and what conception of nature is implicit in its vision It is also often assumed that in order to consider all aspects of nanotechnologies it is sufficient to know a bit of the science and to have some ethical intuitions This collection of papers establishes that one also needs to appreciate nanoscale research and development in the larger context of the changing relations of science technology and society

Dispute Settlement in International Space Law Gérardine Goh, 2007-06-30 The existence of international law with its rights rules and regulations is futile without an effective enforcement mechanism that provides a sufficient and adequate remedy International space law is particularly significant in the evolution of international dispute settlement because it involves a consideration of issues from an international and interdisciplinary perspective These issues range from policies of regional and international organizations to juridical dispute settlement and global governance to fiscal entrepreneurship and business efficacy and to scientific breakthroughs and technological advances In this context this book looks at an international and interdisciplinary approach in dealing with dispute resolution in space activities It proposes a workable legal framework for dispute resolution in outer space together with a mechanism for enforcement and verification
