Part Two discusses the full range of therapeutic protocols available from pharmacological therapies through psychological techniques, physical therapy and international procedures to techniques specific to pain assessment and management in paediatric patients. Part Three provides information on planning, conducting, analysing and publishing clinical trials with invaluable guidance on the techniques of systematic review and meta-analysis in pain research. Part Four considers the role of multidisciplinary pain management teams, their organization, their place within different health care systems and how best to manage change when implementing such a service.
