ECODESIGN Pilot Wolfgang Wimmer, Rainer Züst, 2003-01-31 Up to now environmental policies have relied mainly on rules regulations and prohibitions This kind of environmental policy a clearly reactive approach has shown a mounting array of limitations There is a clear need to seek new solutions in particular those involving the initiative of firms themselves Since the mid 1980 s a new approach called environmental management has been established in research and practical applications it is designed to systematically integrate environmental considerations into company activities If for instance environmental objectives are being formulated for an enterprise it is imperative to identify highlight and analyze real and significant environmental impacts of the firm s activities and to take appropriate measures to improve its performance Controlling and implementing these environmental objectives requires suitable structures procedures and tools Many motivated companies have approached the issue of environmental management through incorporating methods such continual improvement processes and Life Cycle Assessment into the various operational activities of the enterprise Some firms initiated such transformation processes at their own production sites because it was easier to identify their own environmental impacts than to analyze let alone mitigate the effects of upstream and downstream processes However in many cases these processes are decisive factors in the overall environmental performance of a product It has become clear that product design can influence these processes to a great extent

Feature Based Product Life-Cycle Modelling

René Soenen, Gustav J. Olling, 2002-11-30 Feature based technology is the key factor towards meeting the increasingly high demands of improving and speeding up the product development process from concept to customer feedback and is therefore expected to be able to provide for a better approach to integrate the complete product design process chain Feature Based Product Life Cycle Modelling is dedicated to exploring the progress towards an integrated solution for the product creation process based on feature technology Hence it encompasses significant phases of the product creation process from conceptual design to recycling including the following topics Life phases modelling Knowledge based engineering Multiple view geometric modelling Technological links among assemblies Manufacturing process cost estimation Manufacturing modelling Machining preparation Product deterioration prediction Product recovery estimation For each topic a state of the art theoretic bases tentative solutions and illustrative examples are detailed demonstrating the successful application of feature technology to the modelling of innovative products and the efficient control of their design The book is a selection of proceedings from the International Conference on Feature Modelling in Advanced Design for the Life Cycle Systems FEATS 2001 which was sponsored by the International Federation for Information Processing IFIP and held in Valenciennes France in June 2001
