Aromatase Inhibitors:

Aromatase Inhibitors B.J.A. Furr, 2006-02-20 Many breast tumours are dependent upon oestrogen for their development and continued growth Over the last 25 years hormone therapy has progressed from the irreversible destruction of endocrine glands to the use of drugs that reversibly suppress oestrogen synthesis or action The inhibition of oestrogen synthesis is most readily achieved by inhibiting the final step in the pathway of oestrogen biosynthesis the reaction which transforms androgens into oestrogens by creating an aromatic ring in the steroid molecule hence the enzyme's trivial name aromatase Whereas the first aromatase inhibitors to be used therapeutically could be shown to produce drug induced inhibition of the enzyme and therapeutic benefits in patients with breast cancer they were not particularly potent and lacked specificity However second generation drugs were developed and most recently third generation inhibitors have evolved which possess remarkable specificity and potency Initial results from clinical trials suggest that these agents will become the cornerstones of future endocrine therapy

Resistance to Aromatase Inhibitors in Breast Cancer Alexey Larionov, 2015-04-25 Aromatase Inhibitors AIs treat postmenopausal estrogen receptor positive tumours which constitute the majority of breast cancer patients This comprehensive volume brings together the current knowledge from different relevant areas including molecular mechanisms and translational aspects of drug resistance in AIs Topics covered include research experimental and clinical data specifically focused on AI resistance in breast cancer The volume will include three sections The first section covers general knowledge about aromatase inhibitors including regulation of aromatase genes and structure and function of aromatase protein The second section provides the detailed mechanisms of resistance to AIs while the third section explores prediction of resistance and potential strategies to overcome resistance Breast cancer is the most common female cancer and AIs significantly improve treatments outcomes compatibly to previously used endocrine treatments However 10-15% of post operative patients develop a relapse during adjuvant treatment with AIs about 25-50% of the patients do not respond to AIs in neo adjuvant or metastatic setting and the majority of metastatic patients who initially respond develop resistance within 3 years There is an important need to understand these mechanisms of resistance in order to develop methods of preventing or overcoming the resistance to AIs which will ensure a more successful outcome in treating breast cancer

Management of Breast Diseases Ismail Jatoi,Manfred

Kaufmann,2010-02-11 In 2002 Lippincott published the Manual of Breast Diseases edited by Professor Ismail Jatoi The current book Management of Breast Diseases is an adaptation of that manual with Professor Manfred Kaufmann of the Goethe University of Frankfurt serving as co editor Most of the chapters from the original manual have been either extensively revised or discarded and several new chapters added This text contains more material than the original manual but it is still intended as a basic guide for the wide spectrum of clinicians surgeons gynecologists oncologists radiation oncologists internists general practitioners who treat breast diseases both benign and malignant To compile this text we assembled experts from throughout the world Thus this text provides not only a broad overview of breast diseases but also highlights different perspectives from different parts of the world Yet it is worth noting that the management of breast cancer is now largely predicated on evidence based medicine Several large randomized prospective trials have demonstrated the efficacy of breast cancer screening and chemoprevention Other large trials have addressed the impact of systemic therapy radiotherapy and variations in local therapy on breast cancer mortality Many of these landmark trials are discussed in this text and they clearly have had a beneficial effect Indeed since about 1990 breast cancer mortality rates have declined substantially in most industrialized countries and this trend is expected to continue in the years ahead
