Concepts In Cell Biology:

Concepts in Cell Biology William Kay Stephenson, 1978-01-01 Concepts in Cell Biology - History and Evolution Vaidurya Pratap Sahi, František Baluška, 2018-03-01 This book discusses central concepts and theories in cell biology from the ancient past to the 21st century based on the premise that understanding the works of scientists like Hooke Hofmeister Caspary Strasburger Sachs Schleiden Schwann Mendel Nemec McClintock etc in the context of the latest advances in plant cell biology will help provide valuable new insights Plants have been an object of study since the roots of the Greek Chinese and Indian cultures Since the term cell was first coined by Robert Hooke 350 years ago in *Micrographia* the study of plant cell biology has moved ahead at a tremendous pace The field of cell biology owes its genesis to physics which through microscopy has been a vital source for piquing scientists interest in the biology of the cell Today with the technical advances we have made in the field of optics it is even possible to observe life on a nanoscale From Hooke s observations of cells and his inadvertent discovery of the cell wall we have since moved forward to engineering plants with modified cell walls Studies on the chloroplast have also gone from Julius von Sachs experiments with chloroplast to using chloroplast engineering to deliver higher crop yields Similarly advances in fluorescent microscopy have made it far easier to observe organelles like chloroplast once studied by Sachs or actin observed by Bohumil Nemec If physics in the form of cell biology has been responsible for one half of this historical development biochemistry has surely been the other *Basic Concepts In Cell Biology And Histology* James C. McKenzie, 1999 Concepts of Cell Biology, Genetics and Evolution Dr. Sapna Sharma, Dr. Nishu Mittal, Dhananjay Singh, 2023-12-07 The book is divided into 9 units containing all the topics that come under the syllabus Each topic consists of a Key Notes section with additional updated information on the topic covered All the topics are amplified well in the main part of the chapters which includes well labeled and neat figures which may be easily understood and reproduced To get the best from this book the material should first be learned from the main part of the topic the later additional information There is a reasonable number of exercises on the topics the questions are well described and explained to guide the reader to related topics **Cell and Molecular Biology** Gerald Karp, Peter van der Geer, 2005 Now fully updated and revised the new Fourth Edition of *Cell and Molecular Biology* not only offers you and your students all of the latest research it also gives students the tools they need to understand the science behind cell biology and ultimately succeed in your course This text is ideal for sophomore junior level courses in cell biology offered out of biology or molecular and cell biology departments *Cell and Molecular Biology* provides an alternative for faculty looking for a text that concentrates on core concepts without sacrificing coverage of experimental evidence Karp explores core concepts in considerable depth and presents experimental detail when it helps to explain and reinforce the concept being explained This edition also continues to offer an exceedingly clear presentation and excellent art program both of which have received high praise in prior editions Basic Concepts in Cell Biology and Histology James C. McKenzie, Robert Melvin Klein, 2000 One of

a series the aim of which is to review tough topics in basic science for maximum comprehension in a short time This volume on cell biology covers the fundamentals cell membranes the cytoplasm and contents the nucleus and then applies these principles to tissue and organ structure
