Library, 1987 **Recent works** Robert Mangold, 1989 **The Lyrical Constructivist** Don Gummer, Peter Plagens, 2001 Don Gummer first came to the attention of the New York art scene in the late 1970s and early 1980s with his painted wood wall reliefs formally layered geometric arrangements with strong architectural influence He would later move from the wooden wall reliefs to metal building shapes of his own imagining Soon the pieces would become free standing works of compelling strength and authority Whether whimsically employing cardboard boxes as forms for his more recent treelike stainless steel and bronze sculptures or creating monumental skyscraper shapes Gummer s unique style is characterized by a masterful attention to craftsmanship and detail His first museum commission was at the Evansville Museum of Arts History Science Evansville Indiana in 1987 In the year 2000 a monumental new work was dedicated at the Butler Institute of American Art in Youngstown Ohio BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved *Logical Thinking in the Pyramidal Schema of Concepts: The Logical and Mathematical Elements* Lutz Geldsetzer, Richard L. Schwartz, 2012-11-30 This new volume on logic follows a recognizable format that deals in turn with the topics of mathematical logic moving from concepts via definitions and inferences to theories and axioms However this fresh work offers a key innovation in its pyramidal graph system for the logical formalization of all these items The author has developed this new methodology on the basis of original research traditional

logical instruments such as Porphyrian trees and modern concepts of classification in which pyramids are the central organizing concept The pyramidal schema enables both the content of concepts and the relations between the concept positions in the pyramid to be read off from the graph Logical connectors are analyzed in terms of the direction in which they connect within the pyramid Additionally the author shows that logical connectors are of fundamentally different types only one sort generates propositions with truth values while the other yields conceptual expressions or complex concepts On this basis strong arguments are developed against adopting the non discriminating connector definitions implicit in Wittgensteinian truth value tables Special consideration is given to mathematical connectors so as to illuminate the formation of concepts in the natural sciences To show what the pyramidal method can contribute to science a pyramid of the number concepts prevalent in mathematics is constructed The book also counters the logical dogma of false contradictory propositions and sheds new light on the logical characteristics of probable propositions as well as on syllogistic and other inferences
