Bryan,Deborah J. Tippins,Chelsea M. Sexton,2023-09-26 This book is a resource for both prospective and practicing elementary teachers as they learn to teach science in ways which foster the development of a community of science learners with multiple perspectives and diverse approaches to problem solving It includes cases that feature dilemmas embedded in rich narrative stories which characterize the lives of teachers of science and by extension their students and serve as tools for discussion critique and reflective practice The introduction to the book explores changing contexts for elementary science teaching and learning and describes how case based pedagogy can be used as a tool for both instruction and research Each subsequent section of the book includes cases that are organized

around topics such as contemporary approaches to teaching elementary science new roles for technology and the creation of inclusive learning environments for all students in elementary science Each case is followed by reflective commentaries and concludes with questions for reflection and discussion Teachers will benefit from these cases as they explore the complexities and ambiguities of elementary science teaching and learning in today s classrooms **Resources in Education** ,1998-04

A Cultural-Historical Study of Children Learning Science Marilyn Fleer,Niklas Pramling,2014-10-01 This book moves beyond the traditional constructivist and social constructivist view of learning and development in science It draws upon cultural historical theory in order to theorise early childhood science education in relation to our currently globalised education contexts The book argues that concept development in science for young children can be better theorised by using Vygotsky s concept of Imagination and creativity Vygotsky s theory of play and his work on higher mental functions particularly the concept of inter and intrapsychological functioning Key concepts are extracted from the theoretical section of the book and used as categories for analysis in presenting evidence and new ideas in the second section of the book In this second part of the book the authors examine how science knowledge has been constructed within particular countries around the globe where empirical research in early childhood science education has occurred The third part of the book examines the nature of the encounter between the teacher and the child during science learning and teaching In the final part of the book the authors look closely at the range of models and approaches to the teaching of early childhood science that have been made available to early childhood teachers to guide their planning and teaching They conclude the book with a theoretical discussion of the cultural historical foundation for early childhood science education followed by a model of teaching scientific concepts to young children in play based settings including homes and community contexts
