Concepts Of Mass In Classical And Modern Physics:

Concepts of Mass in Classical and Modern Physics Max Jammer, 1997-01-01 Rigorous concise and provocative monograph analyzes the ancient concept of mass the neoplatonic concept of inertia the modern concept of mass mass and energy and much more 1964 edition *Concepts of Mass in Classical and Modern Physics* Max Jammer, 1993-01-01

Concepts of Mass, in Classical and Modern Physics Merton J. Peck, 1961 **Concepts of Mass in Contemporary Physics and Philosophy** Max Jammer, 2009-06-28 Jammer then devotes a chapter to the distinction between inertial and gravitational mass and to the various versions of the so called equivalence principle with which Newton initiated his Principia but which also became the starting point of Einstein's general relativity which supersedes Newtonian physics The book concludes with a presentation of recently proposed global and local dynamical theories of the origin and nature of mass

The Discovery of Dynamics Julian B. Barbour, 2001 Originally published as Absolute or relative motion volume 1 The discovery of dynamics Cambridge University Press 1989 The Relations of Particles Lev Borisovich Okun?, 1991 Written and published in journals during the 1980s these papers address various relations between various particles and between physical quantities describing their properties between experiment and theory in particle physics and between particle physics other branches of physics and the teaching of physics Paper edition unseen 18 Annotation copyrighted by Book News Inc Portland OR *Philosophy of Science in Practice* Hsiang-Ke Chao, Julian Reiss, 2016-12-27 This volume reflects the philosophy of science in practice approach and takes a fresh look at traditional philosophical problems in the context of natural social and health research Inspired by the work of Nancy Cartwright that shows how the practices and apparatuses of science help us to understand science and to build theories in the philosophy of science this volume critically examines the philosophical concepts of evidence laws causation and models and their roles in the process of scientific reasoning Each chapter is an important one in the philosophy of science while the volume as a whole deals with these philosophical concepts in a unified way in the context of actual scientific practice This volume thus aims to contribute to this new direction in the philosophy of science Gribov Memorial Volume: Quarks, Hadrons And Strong Interactions - Proceedings Of The Memorial Workshop Devoted To The 75th Birthday Of V N Gribov Yuri L Dokshitzer, Peter Levai, Julia Nyiri, 2006-06-07 Vladimir Naumovich Gribov was one of the most outstanding theorists a key figure in the creation of the modern elementary particle physics His many discoveries are famous and well accepted by the physics community Gribov Regge theory of high energy hadron interactions Gribov vacuum pole Pomeron Reggeon field theory parton evolution equations neutrino oscillations Gribov copies in non Abelian gauge field theories etc Some of his ideas look unacceptable and strange at the first glance Even at the second glance Nowadays under the weight of new theoretical developments and experimental results his ideas are receiving the recognition they deserve The Gribov Memorial

Workshop organized on his 75th birthday in Budapest Hungary in 2005 clearly demonstrated the wealth and fertilization force of his ideas Close colleagues younger followers world experts of the quark hadron world have gathered together to display new angles of the Gribov heritage And to remember the personality of a great man This book collects the talks presented at and contributed to the Gribov 75 Memorial Workshop Particle Physics at the Year of 250th Anniversary of Moscow University A. Short Review of the Unitary Quantum Theory Leo G. Sapogin, V. A. Dzhanibekov, Yu. A. Ryabov, The paper proposes a model of a unitary quantum field theory where the particle is represented as a wave packet The frequency dispersion equation is chosen so that the packet periodically appears and disappears without changing its form The envelope of the process is identified with a conventional wave function Equation of such a field is nonlinear and relativistically invariant With proper adjustments they are reduced to Dirac Schroedinger and Hamilton Jacobi equations A number of new experimental effects are predicted both for high and low energies **An Idiot's Fugitive Essays on Science** C. Truesdell, 2012-12-06 When after the agreeable fatigues of solicitation Mrs Millamant set out a long bill of conditions subject to which she might by degrees dwindle into a wife Mirabell offered in return the condition that he might not thereby be beyond measure enlarged into a husband With age and experience in research come the twin dangers of dwindling into a philosopher of science while being enlarged into a dotard The philosophy of science I believe should not be the preserve of senile scientists and of teachers of philosophy who have themselves never so much as understood the contents of a textbook of theoretical physics let alone done a bit of mathematical research or even enjoyed the confidence of a creating scientist On the latter count I run no risk Any reader will see that I am untrained though not altogether unread in classroom philosophy Of no ignorance of mine do I boast indeed I regret it but neither do I find this one ignorance fatal here for few indeed of the great philosophers to explicate whose works hodiernal professors of philosophy destroy forests of pulp were themselves so broadly and specially trained as are their scholiasts In attempt to palliate the former count I have chosen to collect works written over the past thirty years some of them not published before and I include only a few very recent essays **John Philoponus' Criticism of Aristotle's Theory of Aether** Christian Wildberg, 1988 No detailed description available for John Philoponus Criticism of Aristotle's Theory of Aether The Ethereal Aether Loyd S. Swenson, Jr., 2013-08-28 The Ethereal Aether is a historical narrative of one of the great experiments in modern physical science The fame of the 1887 Michelson Morley aether drift test on the relative motion of the earth and the luminiferous aether derives largely from the role it is popularly supposed to have played in the origins and later in the justification of Albert Einstein's first theory of relativity its importance is its own As a case history of the intermittent performance of an experiment in physical optics from 1880 to 1930 and of the men whose work it was this study describes chronologically the conception experimental design first trials repetitions influence on physical theory and eventual climax of the optical experiment Michelson Morley and their colleague Miller were the prime

actors in this half century drama of confrontation between experimental and theoretical physics The issue concerned the relative motion of Spaceship Earth and the Universe as measured against the background of a luminiferous medium supposedly filling all interstellar space At stake it seemed were the phenomena of astronomical aberration the wave theory of light and the Newtonian concepts of absolute space and time James Clerk Maxwell's suggestion for a test of his electromagnetic theory was translated by Michelson into an experimental design in 1881 redesigned and reaffirmed as a null result with Morley in 1887 thereafter modified and partially repeated by Morley and Miller finally completed in 1926 by Miller alone then by Michelson's team again in the late 1920s Meanwhile Helmholtz Kelvin Rayleigh FitzGerald Lodge Larmor Lorentz and Poincaré most of the great names in theoretical physics at the turn of the twentieth century had wrestled with the anomaly presented by Michelson's experiment As the relativity and quantum theories matured wave particle duality was accepted by a new generation of physicists The aether drift tests disproved the old and verified the new theories of light and electromagnetism By 1930 they seemed to explain Einstein relativity and space time But in historical fact the aether died only with its believers

Conceptualism and Materiality Christian Berger, 2019-07-08 Conceptualism and Materiality Matters of Art and Politics underscores the significance of materials and materiality within Conceptual art and conceptualism more broadly It challenges the notion of conceptualism as an idea centered anti materialist enterprise and highlights the political implications thereof The essays focus on the importance of material considerations for artists working during the 1960s and 1970s in different parts of the world In reconsidering conceptualism's neglected material aspects the authors reveal the rich range of artistic inquiries into theoretical and political notions of matter and material Their studies revise and diversify the account of this important chapter in the history of twentieth century art a reassessment that carries wider implications for the study of art and materiality in general

The Architectonic of Philosophy Leslie Kavanaugh, 2025-10-01 In the Architectonic of Philosophy Leslie Kavanaugh chose three architectonics philosophical structures to be examined more extensively These are Plato's Chora the continuum of Aristoteles and finally Leibniz's labyrinth The concept of the architectonic is borrowed from Kant albeit with differing intentions Whereas the history of philosophy defines metaphysics as asking the question What is Being here is asked Where is Being What is to be analysed is indeed part of the tradition of metaphysics to inquire about Being qua being but here the inquiry is into its structure its position within the ontological whole In doing this analyses two points become explicit One Ontology has a structure and two the status of Being within this structure

Conceptual Change G.A. Pearce, P. Maynard, 2012-12-06 During Halloween of 1970 the Department of Philosophy of the University of Western Ontario held its annual fall colloquium at London Ontario The general topic of the sessions that year was conceptual change The thirteen papers composing this volume stem more or less directly from those meetings six of them are printed here virtually as delivered while the remaining seven were subsequently written by invitation The programme of the colloquium was to have consisted of major papers delivered by

Professors Wilfrid Sellars Stephan Korner Paul Ziff and Hilary Putnam with shorter commentary thereupon by Professors Robert Binkley Joseph Ullian Jerry Fodor and Robert Barrett respectively And that is the way it happened with one important exception at the eleventh hour Sellars and Binkley exchanged roles This gave Binkley the rather unusual and challenging task of providing a suitable Sellarsian answer to a question not of his own asking for Binkley's paper was written under Sellars original title Sellars own contribution to the volume is perhaps more nearly what he would have presented as main speaker than a direct response to Binkley However it has seemed best on balance to attempt no further stylistic accommodation of the one paper to the other their mutual philosophical relevance will be evident in any case The editors would here like to extend special thanks to both Sellars and Binkley for their extraordinary efforts under the circumstances

From Chemistry to Consciousness Harald Atmanspacher, Ulrich Müller-Herold, 2016-09-20 This book reflects on the significant and highly original scientific contributions of Hans Primas A professor of chemistry at ETH Zurich from 1962 to 1995 Primas continued his research activities until his death in 2014 Over these 50 years and more he worked on the foundations of nuclear magnetic resonance spectroscopy contributed to a number of significant issues in theoretical chemistry helped to clarify central topics in quantum theory and the philosophy of physics suggested innovative ways of addressing interlevel relations in the philosophy of science and introduced cutting edge approaches in the flourishing young field of scientific studies of consciousness His work in these areas of research and its continuing impact is described by noted experts colleagues and collaborators of Primas All authors contextualize their contributions to facilitate the mutual dialog between these fields

The Conceptual Completion and Extensions of Quantum Mechanics 1932-1941. Epilogue: Aspects of the Further Development of Quantum Theory 1942-1999 Jagdish Mehra, 2004-09-08 Quantum Theory together with the principles of special and general relativity constitute a scientific revolution that has profoundly influenced the way in which we think about the universe and the fundamental forces that govern it The Historical Development of Quantum Theory is a definitive historical study of that scientific work and the human struggles that accompanied it from the beginning Drawing upon such materials as the resources of the Archives for the History of Quantum Physics the Niels Bohr Archives and the archives and scientific correspondence of the principal quantum physicists as well as Jagdish Mehra's personal discussions over many years with most of the architects of quantum theory the authors have written a rigorous scientific history of quantum theory in a deeply human context This multivolume work presents a rich account of an intellectual triumph a unique analysis of the creative scientific process The Historical Development of Quantum Theory is science history and biography all wrapped in the story of a great human enterprise Its lessons will be an aid to those working in the sciences and humanities alike

Seven Fundamental Concepts in Spacetime Physics Vesselin Petkov, 2024-01-12 The book presents seven fundamental concepts in spacetime physics mostly by following Hermann Minkowski's revolutionary ideas summarized in his 1908 lecture Space and Time These concepts are spacetime inertial and accelerated motion in

spacetime physics the origin and nature of inertia in spacetime physics relativistic mass gravitation gravitational waves and black holes They have been selected because they appear to be causing most misconceptions and confusion in spacetime physics This second edition has been revised to include additional clarifications more detailed elaboration of the arguments and also new material published in the interim
