Conceptual Coordination William J. Clancey, 1999-08-01 This book bridges the gap between models of human behavior that are based on cognitive task analysis and those based on neural networks The author argues that these approaches are incomplete and not properly related to each other His synthesis reconciles the very different conceptualizations of human memory assumed by these two approaches by assuming that what the brain remembers is not a collection of symbols or neurons or even networks of either of these but rather how to coordinate behavior in time relating different modalities of conception and movement A second premise is that behavior sequences are categorized with perceptual categorizations sounds images comprising the first order of categorization and conceptual categorizations of perceptions and actions in time comprising the second order The conceptual categorizations are themselves sequenced and categorized corresponding to the familiar classification hierarchies in cognitive models Inspired by Bartlett's work the author seeks to develop a theory of process memory memory for experience in time Following the methodology of situated cognition he finds clues in the particulars of human activity such as typing errors how a computer interface is used how a child learns to play in a swimming pool odd limitations in language comprehension and so on Throughout he examines existing and often famous cognitive and neural models with respect to these phenomena In each case he attempts to show that the experienced behavior can be understood as sequences of categories being reactivated substituted and composed Ultimately this analysis is shown to be the link that may lead to improvement of both symbolic and neurally based models of memory and behavior with concomitant implications for cognitive psychology artificial intelligence and cognitive science as a whole

The Cambridge Handbook of Situated Cognition Philip Robbins, Murat Aydede, 2009 This book is a guide to a movement in cognitive science showing how environmental and bodily structure shapes cognition

The Cambridge Handbook of Consciousness Philip David Zelazo, Morris Moscovitch, Evan Thompson, 2007-05-14 The Cambridge Handbook of Consciousness is the first of its kind in the field and its appearance marks a unique time in the history of intellectual inquiry on the topic After decades during which

consciousness was considered beyond the scope of legitimate scientific investigation consciousness re emerged as a popular focus of research towards the end of the last century and it has remained so for nearly 20 years There are now so many different lines of investigation on consciousness that the time has come when the field may finally benefit from a book that pulls them together and by juxtaposing them provides a comprehensive survey of this exciting field An authoritative desk reference which will also be suitable as an advanced textbook

Heidegger and Kabbalah Elliot R. Wolfson, 2019-10-01 While many scholars have noted Martin Heidegger s indebtedness to Christian mystical sources as well as his affinity with Taoism and Buddhism Elliot R Wolfson expands connections between Heidegger s thought and kabbalistic material By arguing that the Jewish esoteric tradition impacted Heidegger Wolfson presents an alternative way of understanding the history of Western philosophy Wolfson s comparison between Heidegger and kabbalah sheds light on key concepts such as hermeneutics temporality language and being and nothingness while yielding surprising reflections on their common philosophical ground Given Heidegger s involvement with National Socialism and his use of antisemitic language these innovative readings are all the more remarkable for their juxtaposition of incongruent fields of discourse Wolfson s entanglement with Heidegger and kabbalah not only enhances understandings of both but more profoundly serves as an ethical corrective to their respective ethnocentrism and essentialism Wolfson masterfully illustrates the redemptive capacity of thought to illuminate common ground in seemingly disparate philosophical traditions

Theories of Learning and Studies of Instructional Practice Timothy Koschmann, 2011-04-19 This is a book about an attempt to change the way math was taught in a particular classroom Its title plays on our everyday usage of the terms theory and practice In education these terms are conventionally treated oppositionally we have theories about what we should do and we have what teachers actually do do In this way theory stands prior logically and chronologically to practice practice inevitably becoming theory s imperfect realization We seek in this volume however to develop a different stance with regard to the relationship between the two Taking the details of instructional practice as our principle object of study we explore what role theories of learning might play in illuminating such practices The book is about actual practices by which teaching is done and how contemporary theories of learning might help us understand those practices It seeks to provide a foundation for future practice based inquiry in education by addressing the methodological question How do we go about studying instructional practice in a principled way

Dynamical Cognitive Science Lawrence M. Ward, 2002 An introduction to the application of dynamical systems science to the cognitive sciences Dynamical Cognitive Science makes available to the cognitive science community the analytical tools and techniques of dynamical systems science adding the variables of change and time to the study of human cognition The unifying theme is that human behavior is an unfolding in time whose study should be augmented by the application of time sensitive tools from disciplines such as physics mathematics and economics where change over time is of central importance The book provides a fast paced comprehensive introduction to the application of dynamical systems science to the cognitive sciences Topics include linear and nonlinear time series analysis chaos theory complexity theory relaxation oscillators and metatheoretical issues of modeling and theory building Tools and techniques are discussed in the context of their application to basic cognitive science problems including perception memory psychophysics judgment and decision making and consciousness The final chapter summarizes the contemporary study of consciousness and suggests how dynamical approaches to cognitive science can help to advance our understanding of this central concept

Cognition and Multi-Agent Interaction Ron Sun, 2006 This book explores the intersection between individual cognitive modeling and modeling of multi agent interaction

Representational Change and the Use of Metaphors in Problem Solving Benjamin Angerer, 2023-07-07 This book addresses a longstanding impasse in problem solving research if structured mental representations of problems are required for solving them how do those arise and if needed change The book argues that established theories underestimate this question due to methodological requirements Proposing to momentarily suspend these requirements including the focus on well defined puzzle tasks the book suggests to alternatively conduct exploratory studies with more complex open ended problems It presents a qualitative case study of participants working for several days on a mental paper folding task designed to challenge them to construct their own representations Charting their use of gestures metaphors and ever more complex descriptions it carefully traces the chronology of their thinking Combining in depth empirical investigation with theory building the book proposes a framework of problem solving that goes beyond established models accommodating associative motivational and affective factors This book will be of great interest to researchers academics and postgraduate students in the fields of cognitive science psychology philosophy of mind and cognition and cognitive artificial intelligence

Working on Mars William J. Clancey, 2012 Beginning in 2004 a team of geologists and other planetary scientists did field science in a dark room in

Pasadena exploring Mars from NASA's Jet Propulsion Laboratory JPL by means of the remotely operated Mars Exploration Rovers MER Clustered around monitors living on Mars time painstakingly plotting each movement of the rovers and their tools sensors and cameras these scientists reported that they felt as if they were on Mars themselves doing field science The MER created a virtual experience of being on Mars This book examines how the MER has changed the nature of planetary field science NASA cast the rovers Spirit and Opportunity as robotic geologists and ascribed machine initiative to remotely controlled actions Clancey argues that the actual explorers were not the rovers but the scientists who imaginatively projected themselves into the body of the machine to conduct the first overland expedition of another planet The author investigates how the design of the rover mission enables field science on Mars explaining how the scientists and rover engineers manipulate the vehicle and why the programmable tools and analytic instruments work so well for them

Cognition, Education, and Communication Technology PETER GARDENFORS, Petter Johansson, 2014-04-08 Cognition Education and Communication Technology presents some of the recent theoretical developments in the cognitive and educational sciences and implications for the use of information and communication technology ICT in the organization of school and university education Internationally renowned researchers present theoretical perspectives with proposals for and evaluations of educational practices Each chapter discusses different aspects of the use of ICT in education including the role of perceptual processes in learning external cognition as support for interactive learning the role of meta cognition simulation learning environments as cognitive tools the role of science controversy for knowledge integration the use of ICT in the development of educators and the role of narratives in education ICT has great potential for revolutionizing education Large investments of resources are being made often without a strong understanding of how ICT will or should be implemented The expectation is that students will show immediate improvements in terms of their motivation to learn and their learning achievements but reality is different Progress of ICT in education requires more than just computers in the classroom It demands an understanding of the complex processes contributing to human learning and how they interact with new technologies This text provides theoretical perspectives on the learning processes that can be used as a foundation for constructing pedagogically valuable tools based on ICT The combination of results from cognitive science and pedagogy with more practically oriented suggestions for how ICT can be used in various forms of education makes this book suitable for researchers and students in the cognitive and educational sciences as well as for practitioners and planners of education
