Nigerian Linguistics Ndimele, Ozo-mekuri,2016-09-13 Studies in Nigerian Linguistics is a compilation of research papers on topical issues in Nigerian languages and linguistics covering three main areas of research viz Language and Society Applied Linguistics and Formal Linguistics The papers in this volume are sectioned as such even though there are bits of overlapping especially for some of the papers contained in the first and second sections The first fifteen 15 papers focus on the major theme of Language and Society in Nigeria Many of the papers in this section address some peculiar sociolinguistic issues that affect the nation including the nagging and lingering problem regarding the language question for the Nigerian nation even after five decades of the attainment of Political Independence language and national development and language varieties Section 2 contains papers in Applied Linguistics in its narrow and extended senses There are papers on language teaching and learning interference and intraference phenomena language engineering with focus on codification communication disorders and much more The third section contains sixteen 16 papers in the core areas of linguistics including phonology morphology and syntax of Nigerian languages Some of the papers address aspects of the phonological and morphosyntactic processes of deletion affixation cliticisation causativisation complementation serialisation agreement and much more The phrasal structure and pronominal systems of some languages were also discussed **Contemporary Leadership Challenges** Aida Alvinius,2017-02-01 Social and behavioral science has for decades studied and recognized leadership as a social exchange between leaders and followers But leadership is rather complex and as such it tends to lead to an increased interest within and across different disciplines This book is an attempt to provide theoretical and empirical framework to better understand leadership challenges in various contexts The authors cover an array of themes that span from an individual level to an organizational and societal level In this volume two sections are presented The first section based on individual level focuses on different leadership styles and abilities and the other section provides theories to understand leadership in public administration in industrial settings and in nonprofit organizations **Linguistic Field Methods** Bert Vaux,Justin Cooper,2007-01-01 Linguistic Field Methods approaches the elicitation of linguistic data from native speaker informants in a novel and engaging manner The authors follow introductory chapters surveying the general enterprise of field research with chapters exploring methods of eliciting data in eight major areas of current linguistic interest phonetics phonology morphology syntax semantics pragmatics sociolinguistics and dialectology and historical linguistics The Future of the Cognitive Revolution David Johnson,Christina Erneling,1997-04-24 The basic idea of the particular way of understanding mental phenomena that has inspired the cognitive revolution is that as a result of certain relatively recent intellectual and technological innovations informed theorists now possess a more powerfully insightful comparison or model for mind than was available to any thinkers in the past The model in question is that of software or the list of rules for input output and internal transformations by which we determine and control the workings of a computing machine s hardware Although this comparison and its many implications have dominated work in the philosophy psychology

and neurobiology of mind since the end of the Second World War it now shows increasing signs of losing its once virtually unquestioned preeminence Thus we now face the question of whether it is possible to repair and save this model by means of relatively inessential tinkering or whether we must reconceive it fundamentally and replace it with something different In this book twenty eight leading scholars from diverse fields of cognitive science linguistics psychology neurophysiology and philosophy present their latest carefully considered judgements about what they think will be the future course of this intellectual movement that in many respects has been a watershed in our contemporary struggles to comprehend that which is crucially significant about human beings Jerome Bruner Noam Chomsky Margaret Boden Ulric Neisser Rom Harre Merlin Donald among others have all written chapters in a non technical style that can be enjoyed and understood by an inter disciplinary audience of psychologists philosophers anthropologists linguists and cognitive scientists alike **The Minimalist Program** Fahad Rashed Al-Mutairi,2014-10-16 This evaluation of Chomsky s work from the perspectives of linguistics evolution of language history of physics and philosophy of mind is interdisciplinary It encourages linguists to reflect on the foundations of their discipline and invites non linguists to appreciate the complexity of human language and its place in the world *Beowulf and Old Germanic Metre* Geoffrey Russom,1998-03-05 This is a clear and accessible account of early Germanic alliterative verse which explains how such verse was treated by the Beowulf poet There are differences of poetic style between Beowulf and the otherwise similar verse of ancient Scandinavia and continental Europe Such distinctions have intrigued scholars for over a century but Russom is the first to provide a systematic explanation of Old English Old Norse Old Saxon and Old High German alliterative metres Russom s results should interest scholars of Old English and related Germanic languages as well as linguists and those concerned with poetic metre **Classic and Contemporary** Irmengard Rauch,Gerald F. Carr,2011-07-20 TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language The series publishes state of the art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science TRENDS IN LINGUISTICS considers itself a forum for cutting edge research based on solid empirical data on language in its various manifestations including sign languages It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints High quality standards are ensured through anonymous reviewing **The Future of the Cognitive Revolution** David Martel Johnson,Christina E. Erneling (ed),1997 The basic idea of the particular way of understanding mental phenomena that has inspired the cognitive revolution is that as a result of certain relatively recent intellectual and technological innovations informed theorists now possess a more

powerfully insightful comparison or model for mind than was available to any thinkers in the past The model in question is that of software or the list of rules for input output and internal transformations by which we determine and control the workings of a computing machine s hardware Although this comparison and its many implications have dominated work in the philosophy psychology and neurobiology of mind since the end of the Second World War it now shows increasing signs of losing its once virtually unquestioned preeminence Thus we now face the question of whether it is possible to repair and save this model by means of relatively inessential tinkering or whether we must reconceive it fundamentally and replace it with something different In this book twenty eight leading scholars from diverse fields of cognitive science linguistics psychology neurophysiology and philosophy present their latest carefully considered judgements about what they think will be the future course of this intellectual movement that in many respects has been a watershed in our contemporary struggles to comprehend that which is crucially significant about human beings Jerome Bruner Noam Chomsky Margaret Boden Ulric Neisser Rom Harre Merlin Donald among others have all written chapters in a non technical style that can be enjoyed and understood by an inter disciplinary audience of psychologists philosophers anthropologists linguists and cognitive scientists alike   Words, Phrases, and Building a Strong Vocabulary Gauraang Asan,2025-01-03 Words Phrases and Building a Strong Vocabulary is your comprehensive guide to understanding and mastering the building blocks of language This book explains the concept of words how to form phrases and ultimately how to develop a rich vocabulary We explore various types of words and phrases providing a broad and detailed understanding of their impact on our lives This book consists of 9 well structured chapters each offering in depth knowledge on how words languages and linguistics affect us With numerous exercises included you can thoroughly grasp the concepts and apply them effectively The language used throughout is simple and reader friendly making it accessible for everyone   **The Development of Chomskyan Generative Grammar** Mei Deming,Tong Helong,2024-06-28 This book explores the major theories of generative grammar from a historical perspective providing an overview of the evolution of this linguistic framework Generative grammar is widely recognized for its major contributions to the study of theoretical linguistics in the twentieth century and has had a profound impact on the fields of linguistics psychology computer science and cognitive science This book consists of eight chapters that trace the development of generative grammar from its beginnings to its current focus on minimalism The first chapter outlines the major stages of generative grammar namely Classical Theory Standard Theory Extended Standard Theory Revised Extended Standard Theory Government and Binding Theory and the Minimalist Program The second chapter reviews the development of the C command relation and illustrates its use in syntactic analysis Each of the following six chapters focuses on a specific area of generative grammar including phrase structure movement Case argument structure binding and raising and control The volume will be an invaluable resource for researchers teachers and students in the fields of generative grammar syntax formal linguistics and the social and cognitive sciences   **Knowledge in Formation** Janos J. Sarbo,Jozsef I. Farkas,Auke

J.J. van Breemen,2011-06-16 Humans have an extraordinary capability to combine different types of information in a single meaningful interpretation The quickness with which interpretation processes evolve suggests the existence of a uniform procedure for all domains In this book the authors suggest that such a procedure can be found They concentrate on the introduction of a theory of interpretation and they define a model that enables a meaningful representation of knowledge based on a dynamic view of information and a cognitive model of human information processing The book consists of three parts The first part focuses on the properties of signs and sign interpretation in the second part the authors introduce a model that complies with the conditions for sign processing set by the first part and in the third part they examine applications of their model in the domain of logic natural language reasoning and mathematics Finally they show how these domains pop up as perspectives in an overall model of knowledge representation The reader is assumed to have some interest in human information processing and knowledge modeling Natural language is considered in the obvious sense familiarity with linguistic theories is not required Sign theoretical concepts are restricted to a manageable subset which is introduced gently Finally some familiarity with basic concepts of propositional and syllogistic logic may be useful

Statutory Interpretation Douglas Walton,Fabrizio Macagno,Giovanni Sartor,2021-01-21 Combining pragmatics dialectics analytics and legal theory this work translates interpretative canons into patterns of natural argument **Contrast and Representations in Syntax** Bronwyn M. Bjorkman,Daniel Currie Hall,2020 This book explores how grammatical oppositions for instance the contrast between present and past tense are encoded in the syntax of natural languages The chapters approach the topic from a range of perspectives drawing on data from a variety of typologically diverse languages including Blackfoot Greek Onondaga and Scottish Gaelic
